Artificial Intelligence And Human Cognition A Theoretical Intercomparison Of Two Realms Of Intellect:

Artificial Intelligence and Human Cognition Morton Wagman, 1991-03-30 Morton Wagman examines the emulation of human cognition by artificial intelligence systems Human thought and computer thought are compared in their distinctiveness and commonality The book provides detailed examples of artificial intelligence programs such as the FERMI System and the KEKADA program accomplishing highly intellectual tasks This together with its coverage of general theoretical perspectives on the nature of cognition make this volume both a valuable sourcebook and a stimulus for students and professionals in cognitive science psychology philosophy and artificial intelligence courses A general introduction to the computational modeling of cognition opens the book Considered next are computational reasoning and human rationality The range depth and sensitivity of mathematical and legal reasoning systems are compared with human mathematicians and human jurisprudence General issues concerning the quality of human rationality are examined in several contexts the prediction of economic behavior mathematical abstraction and the concept of the infinitesimal and probabilistic judgement under uncertainty Other chapters consider the nature of problem solving in the context of general intellectual principles and specific domain knowledge the cognition of scientific discovery and language representation modes and information processing efficiency In the last chapter the most impressive intellectual achievements of AI systems are summarized Directions for further intellectual research in this realm are also indicated

Human Intellect and Cognitive Science Morton Wagman, 1996-02-28 The advancement of knowledge concerning the complexities of human intellectual processes can best be achieved by combining theory and research from the disciplines of cognitive psychology and artificial intelligence Wagman explores various aspects of these disciplines to further his ideas He examines the nature of the human intellect and proposes a theory of representation and intelligence that is applicable to human computer and animal cognition He also evaluates theory and research concerned with structure and process in human reasoning and human problem solving Several scientific discovery systems including BACON FARENHEIT and IDS are described in depth The ability of these systems to emulate solutions to 10 types of scientific problems is examined The capacity theory of language comprehension is also presented and extended to the domain of cognitive processes

Critiques of Knowing Lynette Hunter, 2002-03-11 *Critiques of Knowing* explores what happens to science and computing when we think of them as texts Lynette Hunter elegantly weaves together vast areas of thought rhetoric politics AI computing feminism science studies aesthetics and epistemology *Critiques of Knowing* shows us that what we need is a radical shake up of approaches to the arts if the critiques of science and computing are to come to any fruition

The Nature of Cognition Robert J. Sternberg, 1999 This book is the first to introduce the study of cognition in terms of the major conceptual themes that underlie virtually all the substantive topics

The Human Mind According to Artificial Intelligence Morton Wagman, 1999-03-30 In an evaluation of the strengths and limitations of artificial intelligence in a number of intellectual domains Wagman draws comparisons with human cognitive ability in those domains

and assesses its role as a theoretical model as a collaborator or as a competitor of the human mind This book distinguishes itself in its structured and detailed account of advancing intellectual developments in the science of artificial intelligence as opposed to a highly technical or vague philosophical treatment of the topic

Cognitive Psychology and Artificial Intelligence Morton Wagman, 1993-02-28 The nature of cognition is examined by the methods of experimental cognitive psychology and the theoretical models of computational psychology First explained is the nature and objectives of artificial intelligence symbolic and connectionist paradigms the architecture of cognition and characteristics of a general theory of intelligence Wagman then examines theory and research in human reasoning and reasoning systems Experimental research in deductive and inductive reasoning the nature of artificial intelligence reasoning systems nonmonotonic and common sense reasoning and general types of reasoning in artificial intelligence are examined Next the author examines the nature of human problem solving and problem solving systems Problem representation methods and their duplication by artificial intelligence is discussed at length Concepts and research in human learning and learning systems are also reviewed as are the nature of human expertise and expert systems Major characteristics of expertise including deep knowledge reasoning strategies and pattern recognition are described and exemplified in research concerned with medical expertise The nature of intelligence and intelligence systems is examined and the physical symbol system hypothesis and its results are analyzed The author covers an artificial intelligence system that emulates the cognitive processes in scientific discovery and its implications for human creativity

Cognitive Science and Concepts of Mind Morton Wagman, 1991-10-30 Following the introductory chapter each succeeding chapter focuses on a major component of cognition Each cognitive component logic reasoning problem solving language memory learning discovery is analyzed from the perspectives of human intellect and artificial intelligence The dual perspectives are then compared The analyses and the comparisons take account of basic theory and describe contemporary research The technical theory and research is considered against a broad background of intellectual history and psychological implication This book is intended for anyone aware of the new intellectual paradigm and psychological challenge of artificial intelligence It is written for the general reader as well as for university students in cognitive science programs artificial intelligence psychology and philosophy courses and for professionals in these and related fields from preface

Scientific Discovery Processes in Humans and Computers Morton Wagman, 2000-05-30 Wagman offers a critical analysis of current theory and research in the psychological and computational sciences directed toward the elucidation of scientific discovery processes and structures It discusses human scientific discovery processes analyzes computer scientific discovery processes and makes a comparative evaluation of the two This work examines the scientific reasoning of the discoverers of the inhibition mechanism of gene control scientific discovery heuristics used at different developmental levels artificial intelligence and mathematical discovery the ECHO system the evolution of artificial intelligence discovery systems the PAULI system and the KEKADA system It concludes with an examination of the extent to

which computational discovery systems can emulate a set of 10 types of scientific problems *Cognitive Science and the Mind-Body Problem* Morton Wagman, 1998-03-25 A scholarly examination of the centrality of the mind body problem within and across the science of cognition from philosophy to psychology to artificial intelligence to neural science Conceptions of the mind body problem range from the heritage of Cartesianism to the identification of the circumscribed brain structures responsible for domain specific cognitive mechanisms Neither narrowly technical nor philosophically vague this is a structured and detailed account of advancing intellectual developments in theory research and knowledge illumined by the conceptual vicissitudes of the mind body problem This unique treatment will be of special interest to creative scholars in the disciplines of the sciences of cognition **The General Unified Theory of Intelligence** Morton Wagman, 1997-02-19 The

general unified theory of intelligence addresses the cognitive functions of thinking reasoning and problem solving At an abstract level this theory construes the intellectual functions of humans and computers as respectively restricted and directed forms of the logic of implication In other words human intelligence operates according to production rules Here Wagman presents the central tenets and research elaboration of the general unified theory of intelligence that embraces both human and artificial intelligence across the cognitive domains of scientific discovery processes inductive and deductive reasoning and the mechanisms basic to analogical thinking and problem solving **The Ultimate Objectives of Artificial**

Intelligence Morton Wagman, 1998-04-23 A critical examination of the advancing intellectual developments in artificial intelligence and evaluation of their salient philosophical and psychological implications This book contains a wealth of research and theory across major domains of cognition that support the broad intellectual artificial intelligence objective of developing a structured and detailed unified science of human and computational intelligence The significant philosophical and psychological implications that derive from pursuing an extraordinary intellectual objective of developing an abstract science of intelligence supported by specific theory and research will be of special interest to creative scholars in the disciplines of the sciences of cognition By considering philosophical and psychological implications derived directly from current theory and research this book is distinguished from speculative books lacking in intellectual grounding

Reasoning Processes in Humans and Computers Morton Wagman, 2003-02-28 Advancing research in artificial intelligence is creating reasoning systems that increasingly emulate or surpass the power of human reasoning This volume presents a critical analysis of current theory and research in psychological and computational sciences addressing reasoning processes Distinguished from narrowly technical books on the one hand and from general philosophical books on the other this work gives a broad structured detailed and critical account of advancing intellectual developments in theories on the nature of reasoning Of special interest is the conclusion that artificial intelligence reasoning systems are deepening and broadening theories of human reasoning A unified theory of intelligent reasoning encompassing natural and computational systems is an important current objective of cognitive science Reasoning systems such as the CHARADE program which simulates the

course of inductive reasoning leading to medical discoveries and the CONSYDERR program which executes the robust theory of common sense reasoning are important demonstrations of the feasibility of a unified theory of human and artificial intelligence
