Artificial Intelligence and the City Federico Cugurullo, Federico Caprotti, Matthew Cook, Andrew Karvonen, Pauline McGuirk, Simon Marvin, 2023-12-01 This book explores in theory and practice how artificial intelligence AI intersects with and alters the city Drawing upon a range of urban disciplines and case studies the chapters reveal the multitude of repercussions that AI is having on urban society urban infrastructure urban governance urban planning and urban sustainability Contributors also examine how the city far from being a passive recipient of new technologies is influencing and reframing AI through subtle processes of co constitution The book advances three main contributions and arguments First it provides empirical evidence of the emergence of a post smart trajectory for cities in which new material and decision making capabilities are being assembled through multiple AIs Second it stresses the importance of understanding the mutually constitutive relations between the new experiences enabled by AI technology and

the urban context Third it engages with the concepts required to clarify the opaque relations that exist between AI and the city as well as how to make sense of these relations from a theoretical perspective Artificial Intelligence and the City offers a state of the art analysis and review of AI urbanism from its roots to its global emergence It cuts across several disciplines and will be a useful resource for undergraduates and postgraduates in the fields of urban studies urban planning geography architecture urban design science and technology studies sociology and politics Artificial Intelligence Perspective for Smart Cities Vahap Tecim, Sezer Bozkus Kahyaoglu, 2022-11-23 The concept of a smart city is used widely in general however it is hard to explain because of the complexity and multidimensionality of this notion However the essential qualification for being a smart city is to achieve sustainable social environmental and economic development and boost the living standards of society based on Information and Communication Technology ICT and Artificial intelligence AI AI in smart cities has become an important aspect for cities that face great challenges to make smart decisions for social well being particularly cybersecurity and corporate sustainability In this context we aim to contribute literature with a value added approach where various AI applications of smart cities are discussed from a different perspective First we start by discussing the conceptual design modeling and determination of components for the sustainability of a smart city structure Since smart cities operate on spatial based data it is important to design operate and manage smart city elements using Geographical Information Systems GIS technologies Second we define the structure type unit and functionality of the layers to be placed on the GIS to achieve best practices based on Industry 4.0 components Transportation is one of the key indicators of smart cities so it is critical to make transportation in smart cities accessible for different disabled groups by using AI technologies Third we demonstrate what kinds of technologies should be used for which disabled groups in different transportation vehicles with specific examples Finally we create a discussion platform for processes and sub processes such as waste management emergency management risk management and data management for establishing smart cities including the financial and ethical aspects Concise Encyclopedia of Human Geography Loretta Lees, David Demeritt, 2023-02-14 With 78 specially commissioned entries written by a diverse range of contributors this essential reference book covers the breadth and depth of human geography to provide a lively and accessible state of the art of the discipline for students instructors and researchers Handbook of Behavioral and Cognitive Geography Daniel R.
