Artificial Neural Networks In Cancer Diagnosis Prognosis And Patient Management:

Artificial Neural Networks in Cancer Diagnosis, Prognosis, and Patient Management R N G Naguib, G. V. Sherbet, 2019-12
The potential value of artificial neural networks ANN as a predictor of malignancy has begun to receive increased recognition Research and case studies can be found scattered throughout a multitude of journals Artificial Neural Networks in Cancer Diagnosis Prognosis and Patient Management brings together the work of top researchers primarily clinicians who present the results of their state of the art work with ANNs as applied to nearly all major areas of cancer for diagnosis prognosis and management of the disease The book introduces the theory of neural networks and the method of their application in oncology It is not an exercise in ANN research but the presentation of a new technique for diagnosing and determining the treatment of cancers The authors have included almost all cancers for which there exist ANN applications When the data available is ill defined and the development of an algorithmic solution difficult neural networks provide a non linear approach which helps sift through the maze of information and arrive at a reasonable solution Highly interdisciplinary in nature this book provides comprehensive coverage of the most important materials relating to the applications of ANNs in the cancer field With contributions from prominent research centers worldwide it serves as an introduction to how neural networks can be used for accurate prediction or diagnosis and shows why neural networks are more accurate Artificial Neural Networks in Cancer Diagnosis Prognosis and Patient Management gives you an understanding of this new tool its applications and when it should be used *Artificial Neural Networks in Cancer Diagnosis, Prognosis, and Patient Management* R. Outcome Prediction in Cancer Azzam F.G. Taktak, Anthony C. Fisher, 2006-11-28 This book is organized into 4 sections each looking at the question of outcome prediction in cancer from a different angle The first section describes the clinical problem and some of the predicaments that clinicians face in dealing with cancer Amongst issues discussed in this section are the TNM staging accepted methods for survival analysis and competing risks The second section describes the biological and genetic markers and the r le of bioinformatics Understanding of the genetic and environmental basis of cancers will help in identifying high risk populations and developing effective prevention and early detection strategies The third section provides technical details of mathematical analysis behind survival prediction backed up by examples from various types of cancers The fourth section describes a number of machine learning methods which have been applied to decision support in cancer The final section describes how information is shared within the scientific and medical communities and with the general population using information technology and the World Wide Web Applications cover 8 types of cancer including brain eye mouth head and neck breast lungs colon and prostate Include contributions from authors in 5 different disciplines

Handbook of Immunohistochemistry and in situ

Hybridization of Human Carcinomas

M. A. Hayat, 2005-09-21 Immunohistochemistry is the use of specific antibodies to stain particular molecular species in situ. This technique has allowed the identification of many more cell types than could be visualized by classical histology, particularly in the immune system and among the scattered hormone-secreting cells of the endocrine system, and has the potential to improve diagnosis, prognosis, and therapeutic options of cancer. This book discusses all aspects of immunohistochemistry and in situ hybridization technologies and the important role they play in reaching a cancer diagnosis. It provides step-by-step instructions on the methods of additional molecular technologies such as DNA microarrays and microdissection, along with the benefits and limitations of each method. The topics of region-specific gene expression, its role in cancer development, and the techniques that assist in the understanding of the molecular basis of disease are relevant and necessary in science today. The only book available that translates molecular genetics into cancer diagnosis. The results of each immunohistochemical and in situ hybridization method are presented in the form of color illustrations. Methods discussed were either developed or refined by expert contributors in their own laboratories.

Information Systems Architecture and Technology: Proceedings of 40th Anniversary International Conference on

Information Systems Architecture and Technology – ISAT 2019

Zofia Wilimowska, Leszek Borzemski, Jerzy Świątek, 2019-09-04 This three-volume book highlights significant advances in the development of new information systems technologies and architectures. Further, it helps readers solve specific research and analytical problems and glean useful knowledge and business value from data. Each chapter provides an analysis of a specific technical problem followed by a numerical analysis, simulation, and implementation of the solution to the real-world problem. Managing an organization, especially in today's rapidly changing environment, is a highly complex process. Increased competition in the marketplace, especially as a result of the massive and successful entry of foreign businesses into domestic markets, changes in consumer behaviour, and broader access to new technologies and information calls for organisational restructuring and the introduction and modification of management methods using the latest scientific advances. This situation has prompted various decision-making bodies to introduce computer modelling of organization management systems. This book presents the peer-reviewed proceedings of the 40th Anniversary International Conference Information Systems Architecture and Technology (ISAT) held on September 15-17, 2019, in Wrocław, Poland. The conference was organised by the Computer Science Department, Faculty of Computer Science and Management, Wrocław University of Sciences and Technology, and University of Applied Sciences in Nysa, Poland. The papers have been grouped into three major sections. Part I discusses topics including, but not limited to, artificial intelligence, methods, knowledge discovery, and data mining, big data, knowledge-based management, Internet of Things, cloud computing, and high-performance computing, distributed computer systems, content delivery networks, and service-oriented computing. Part II addresses various topics such as system modelling for control, recognition, and decision

support mathematical modelling in computer system design service oriented systems and cloud computing and complex process modelling Part III focuses on a number of themes like knowledge based management modelling of financial and investment decisions modelling of managerial decisions production systems management and maintenance risk management small business management and theories and models of innovation
