The progression of the independent states that were created after the collapse of the Soviet Union has become a prevalent area of research as these countries continue to make infrastructural strides. These regions possess vastly desirable natural resources including oil, gas, and minerals, causing this section of the world to have rising global importance as they continue to improve their economy, educational systems, and tourism industries. *Economic, Educational, and Touristic Development in Asia* is a pivotal reference source that provides a thorough examination of the contemporary progression of several recently formed countries within Central Asia. While highlighting topics such as hospitality, marketing, anti-corruption reform, and entrepreneurship, this publication explores the technological, educational, and security enhancements being made in these areas, as well as how this region can strengthen its prosperity by strategically utilizing their globally coveted natural resources. This book is ideally designed for economists, higher education faculty, provosts, chancellors, scholars, practitioners, policymakers, business professionals, marketers, restaurateurs, hotel managers, tour developers, travel agencies, government officials, strategists, educators, researchers, and graduate students. *Toward an Environmental Strategy for Asia* Carter, Brandon, Ramesh Ramankutty, 1993-01-01. World Bank Discussion Paper No. 224. All of the World Bank's priorities for environmental aid to Asia are described in this comprehensive manual. Also featured is a framework to improve the region's environmental management and achieve sustainable development. *Managing Regional Energy Vulnerabilities in East Asia* Daojiong Zha, 2013-08-29. This book examines East Asia's inter-state collaborative energy projects to address energy vulnerability. It focuses on projects that have demonstrated effectiveness in addressing vulnerabilities faced by the ten states of the Association of Southeast Asian Nations and China, Japan, and South Korea in Northeast Asia. Including case studies on uncertainties in external sources of oil and gas supply, maritime piracy, continuation of energy poverty, and geographical barriers to cross-border electricity interconnection, expert contributors highlight how collaborative energy projects have been more successful than the traditional state rivalry in energy-related issues. The book develops the framework of energy vulnerability, avoiding usual securitization approaches, instead examining non-traditional security conceptualizations in studying energy policies to examine how issue-specific cooperation efforts between states arise and develop. Using East Asia as a starting point, contributors introduce a framework that advances the study of international energy cooperation. *Managing Regional Energy Vulnerabilities in East Asia* will be of interest to students and scholars of Asian studies, sociology, development studies, and international political economy, particularly the political economy of East Asia, energy and development studies, regional and global governance of energy, and the environmental economics. **China and India** Hong Zhao, 2013-06-19. The book sheds understanding on the relations

between development and global energy security by looking at China and India. It addresses the following issues: what is the new definition of energy security; how does it affect global politics and international relations; What are the energy security concerns of China and India and what policies and approaches have they taken to deal with energy security issues. Since China and India are searching for oil and gas in the Middle East, Africa and Southeast Asia, will their acquisition efforts conflict with the interests of other energy giants such as the U.S., Japan, and will their growing overseas activities challenge U.S. policy in those energy rich regions. The book provides insight into what the new global energy order may be and how the growth models and energy structures may shape the economic growth and energy. It analyzes both the state centered approach and market oriented approach in the global quest for energy resources. It also examines how China and India can adopt a cooperative approach for beneficial relations. The book will be of interest to anyone who is keen to learn how the World, especially U.S.A. can accommodate and adapt to the new global energy dynamics. China and India as new players in global energy markets.
