Inventing the Alphabet Johanna Drucker, 2022-08-08 The first comprehensive intellectual history of alphabet studies Inventing the Alphabet provides the first account of two and a half millennia of scholarship on the alphabet Drawing on decades of research Johanna Drucker dives into sometimes obscure and esoteric references dispelling myths and identifying a pantheon of little known scholars who contributed to our modern understandings of the alphabet one of the most important inventions in human history Beginning with Biblical tales and accounts from antiquity Drucker traces the transmission of ancient Greek thinking about the alphabet's origin and debates about how Moses learned to read The book moves through the centuries finishing with contemporary concepts of the letters in alpha numeric code used for global communication systems Along the way we learn about magical and angelic alphabets antique inscriptions on coins and artifacts and the comparative tables of scripts that continue through the development of modern fields of archaeology and paleography This is the first book to chronicle the story of the intellectual history through which the alphabet has been invented as an object of scholarship

The K-Effect Christopher GoGwilt, 2023-12-05 The K Effect shows how the roman alphabet has functioned as a standardizing global model for modern print culture Investigating the history and ongoing effects of romanization Christopher GoGwilt reads modernism in a global and comparative perspective through the works of Joseph Conrad and others The book explores the ambiguous effect of romanized transliteration both in the service of colonization and as an instrument of decolonization This simultaneously standardizing and destabilizing effect is abbreviated in the way the letter K indexes changing hierarchies in the relation between languages and scripts The book traces this K effect through the linguistic work of transliteration and its aesthetic organization in transnational modernism The book examines a variety of different cases of romanization the historical shift from Arabic script to romanized print form in writing Malay the politicization of language and script reforms across Russia and Central Europe the role of Chinese debates about romanization in shaping global transformations in print media and the place of romanization between ancient Sanskrit models of language and script and contemporary digital forms of coding Each case study develops an analysis of Conrad's fiction read in comparison with such other writers as James Joyce Lu Xun Franz Kafka and Pramoedya Ananta Toer The first sustained cultural study of romanization The K Effect proposes an important new way to assess the multi lingual and multi script coordinates of modern print culture

Script Effects as the Hidden Drive of the Mind, Cognition, and Culture Hye K. Pae, 2020-10-14 This open access volume reveals the hidden power of the script we read in and how it shapes and drives our minds ways of thinking and cultures Expanding on the Linguistic Relativity Hypothesis i.e. the idea that language

affects the way we think this volume proposes the Script Relativity Hypothesis i.e the idea that the script in which we read affects the way we think by offering a unique perspective on the effect of script alphabets morphosyllabaries or multi scripts on our attention perception and problem solving Once we become literate fundamental changes occur in our brain circuitry to accommodate the new demand for resources The powerful effects of literacy have been demonstrated by research on literate versus illiterate individuals as well as cross scriptal transfer indicating that literate brain networks function differently depending on the script being read This book identifies the locus of differences between the Chinese Japanese and Koreans and between the East and the West as the neural underpinnings of literacy To support the Script Relativity Hypothesis it reviews a vast corpus of empirical studies including anthropological accounts of human civilization social psychology cognitive psychology neuropsychology applied linguistics second language studies and cross cultural communication It also discusses the impact of reading from screens in the digital age as well as the impact of bi script or multi script use which is a growing trend around the globe As a result our minds ways of thinking and cultures are now growing closer together not farther apart

The Alphabetisation of Thought Michael M. Isermann, 2025-03-20 The Alphabetisation of Thought is a bold and original study about the rise spread and dominance of orthographic thinking in the Early Modern period Starting out as a local grammatical mode of thinking it soon gained momentum strength and depth turning into a development that provoked a wholesale reorganisation of thought along the lines of alphabetical writing The study brings together an unprecedented range of texts from areas as diverse as grammar epistemology classical scholarship natural philosophy and cryptography A major source of evidence is Locke's doctrine of ideas as laid out in his Essay Concerning Human Understanding Echoing the orthographic debate of the preceding 150 years it affords not only crucial insight into the final stages of the alphabetisation process but also glimpses of its legacy

Visual Processes in Reading and Reading Disabilities Dale M. Willows, Richard Kruk, Evelyne Corcos, 2012-12-06 Over the last 25 years reading processes have been the focus of an enormous amount of research in experimental psychology as well as in other disciplines The theories and models emerging from this research have greatly advanced understanding of both normal acquisition and of reading disabilities Although great progress has been made there are certain aspects that have been relatively neglected in the current understanding Specifically the role of visual factors has received less attention than that of other component processes This is particularly surprising since reading and writing are distinct from the other language processes of speaking and listening in large part by virtue of the fact that a visual dimension is involved Relevant research is broadly scattered both geographically and in terms of disciplines and there have been no major reviews or books concerned with the visual dimension of reading and reading disabilities The purpose of

this book is to bring together a broad range of evidence that concerns the role of visual information in reading and reading disabilities Because reading processes are of central interest to cognitive scientists neuropsychologists psycholinguists clinicians and educators this book should draw a very broad readership The Handbook of Mathematical Cognition Jamie I.D. Campbell,2005-08-15 How does the brain represent number and make mathematical calculations What underlies the development of numerical and mathematical abilities What factors affect the learning of numerical concepts and skills What are the biological bases of number knowledge Do humans and other animals share similar numerical representations and processes What underlies numerical and mathematical disabilities and disorders and what is the prognosis for rehabilitation These questions are the domain of mathematical cognition the field of research concerned with the cognitive and neurological processes that underlie numerical and mathematical abilities The Handbook of Mathematical Cognition is a collection of 27 essays by leading researchers that provides a comprehensive review of this important research field **The Alphabet Effect** Robert K. Logan,2004 This book is a study of this evolution of writing systems It describes the role the phonetic alphabet has played in the development of Western civilization Drawing a variety of conclusions about how societies advance the author shows how the advent of mass communication and the use of computers affect how we communicate
