Alternating Sequential-Parallel Processing Y. Wallach, 1982-02 Mathematical Foundations Of Parallel Computing V V Voevodin, 1992-03-24 Parallel implementation of algorithms involves many difficult problems In particular among them are round off analysis the way to convert sequential programs and algorithms into the parallel mode the choice of appropriate or optimal computer architect and so on To solve these problems it is necessary to know very well the structure of algorithms This book deal with the mathematical mechanism that permits us to investigate structures of both sequential and parallel algorithms This mechanism allows us to recognize and explain the relations between different methods of constructing parallel algorithms the methods of analysing round off errors the methods of optimizing memory traffic the methods of working out the fastest implementation for a given parallel computer and other methods attending the joint investigation of algorithms and computers **Patterns and Waves** T. Nishida, M. Mimura, H. Fujii, 2011-09-22 Part I of this volume surveys the developments in the analysis of nonlinear phenomena in Japan during the past decade while Part II consists of up to date original papers concerning qualitative theories and their applications Dealt with here are nonlinear problems related to general analysis fluid dynamics mathematical biology and computer sciences and their underlying mathematical structures e g nonlinear waves and propagations bifurcation phenomena chaotic phenomena and fractals The volume is dedicated to Professor Masaya Yamaguti in celebration of his 60th birthday Mathematical Methods of Specification and Synthesis of Software Systems '85 Wolfgang Bibel, Klaus P. Jantke, 1986-06-01 *Algorithms for Elliptic Problems* Marián Vajtersic, 2013-03-09 This volume deals with problems of modern effective algorithms for the numerical solution of the most frequently occurring elliptic partial differential equations From the point of view of implementation attention is paid to algorithms for both classical sequential and parallel computer systems The first two chapters are devoted to fast algorithms for solving the Poisson and biharmonic equation In the third chapter parallel algorithms for model parallel computer systems of the SIMD and MIMD types are described The implementation aspects of parallel algorithms for solving model elliptic boundary value problems are outlined for systems with matrix pipeline and multiprocessor parallel computer architectures A modern and popular multigrid computational principle which offers a good opportunity for a parallel realization is described in the next chapter More parallel variants based in this idea are presented whereby methods and assignments strategies for hypercube systems are treated in more detail The last chapter presents VLSI designs for solving special tridiagonal linear systems of equations arising from finite difference approximations of elliptic problems For researchers interested in the development and application of fast algorithms for solving elliptic partial differential equations using advanced computer systems *A Hierarchical Associative Processing System* Heinrich J.
