

# Parallel Operation Of alternators

R Existing system

Conditions for parallel operation:-

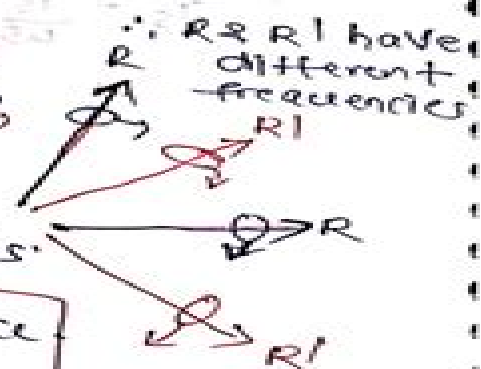

1. The terminal voltage of incoming alternator must be same as that of existing system. Otherwise circulating currents between the two systems. They causes unwanted cu losses, heating effect, reduction in efficiency.

This condition can be verified by a voltmeter connected across two systems. when voltmeter reads zero both are said to be at same potential

2. Frequency of incoming alternator must be same as that of existing system, otherwise circulating currents blow the two systems.

∴ vector potential difference  
∴ circulating currents

∴ same frequency, no potential difference  
no circulating current
