Assaulted Personhood Craig C.

Malbon,2020-12-14 In 21st century America personhood is under daily assault sometimes with dire consequences Scientist ethicist and ordained minister Craig C Malbon encourages the reader to consider such assaults on personhood endured by

victims of abortion ageism Alzheimer's disease drug addiction mental and physical disabilities gender gender orientation racism sexual preference identity politics and our will to power over the other In exploring personhood status Malbon poses difficult questions for us Is personhood assigned as all or nothing or is it a sliding scale based upon criteria arbitrarily aimed at our vulnerabilities Does the voiceless embryo and fetus have advocates who can speak to the moral question of abortion Is the personhood of an economically insecure pregnant woman degraded to the point where lack of access to early termination of pregnancy results in coercive childbearing Does being a member of the LGBTQI community target one for assaults on personhood to the extreme of being killed In delving into the biology and psychology of assaults of self upon the other Malbon sees powerful linkages of everyday assaults on personhood to darker profound original sins that are foundational to the rise of the American empire i.e. assaults on the indigenous Native Americans and assaults derivative to the institution of slavery upon Africans African Americans and their descendants

Cognitive Neuroscience of Language David Kemmerer, 2014-11-20

Language is one of our most precious and uniquely human capacities so it is not surprising that research on its neural substrates has been advancing quite rapidly in recent years Until now however there has not been a single introductory textbook that focuses specifically on this topic Cognitive Neuroscience of Language fills that gap by providing an up to date wide ranging and pedagogically practical survey of the most important developments in the field It guides students through all of the major areas of investigation beginning with fundamental aspects of brain structure and function and then proceeding to cover aphasia syndromes the perception and production of speech the processing of language in written and signed modalities the

meanings of words and the formulation and comprehension of complex expressions including grammatically inflected words complete sentences and entire stories Drawing heavily on prominent theoretical models the core chapters illustrate how such frameworks are supported and sometimes challenged by experiments employing diverse brain mapping techniques Although much of the content is inherently challenging and intended primarily for graduate or upper level undergraduate students it requires no previous knowledge of either neuroscience or linguistics defining technical terms and explaining important principles from both disciplines along the way
