Minds and Computers Matt Carter,2009 *Made-up Minds* Gary L. Drescher,1991 *Made Up Minds* addresses fundamental questions of learning and concept invention by means of an innovative computer program that is based on the cognitive developmental theory of psychologist Jean Piaget Drescher uses Piaget s theory as a source of inspiration for the design of an artificial cognitive system called the schema mechanism and then uses the system to elaborate and test Piaget s theory The approach is original enough that readers need not have extensive knowledge of artificial intelligence and a chapter summarizing Piaget s work assists readers who lack a background in developmental psychology *Simulating the Mind* Dietmar Dietrich,Georg Fodor,Gerhard Zucker,Dietmar Bruckner,2010-01-12 Can psychoanalysis offer a new computer model Can computer designers help psychoanalysts to understand their theory better In contemporary publications human psyche is often related to neural networks Why The wiring in computers can also be related to application software But does this really make sense Artificial Intelligence has tried to implement functions of human psyche The reached achievements are remarkable however the goal to get a functional model of the mental apparatus was not reached Was the selected direction incorrect The editors are convinced yes and they try to give answers here If one accepts that the brain is an information processing system then one also has to accept that computer theories can be applied to the brain s functions the human mental apparatus The contributors of this book Solms Panksepp Sloman and many others who are all experts in computer design psychoanalysis and neurology are united in one goal finding synergy in their interdisciplinary fields *Visions of Mind* Darryl N. Davis,2005-01-01 What is mind Can we build synthetic or artificial minds Think these questions are only reserved for Science Fiction Well not anymore This collection presents a diverse overview of where the development of artificial minds is as the twenty first century begins Examined from nearly all viewpoints *Visions of Mind* includes perspectives from philosophy psychology cognitive science social studies and artificial intelligence This collection comes largely as a result of many conferences and symposiums conducted by many of the leading minds on this topic At the core is Professor Aaron Sloman s symposium from the spring 2000 UK Society for Artificial Intelligence conference Authors from that symposium as well as others from around the world have updated their perspectives and contributed to this powerful book The result is a multi disciplinary approach to the long term problem of designing a human like mind whether for scientific social or engineering purposes The topics addressed within this text are valuable to both artificial intelligence and cognitive science and also to the academic disciplines that they draw on and feed Among those disciplines are philosophy
