Jelacic, 1974 **Trade Policy Issues and Empirical Analysis** Robert E. Baldwin, 2008-04-15 Interest in U S trade policy has been stimulated in recent years by the massive American trade deficit by the belief that intervention by foreign governments in international markets has given other countries a competitive edge over the United States and by concern about the increase in protectionism among industrial countries In turn major analytical developments in international economics have revolutionized trade theory broadening its scope both by introducing in a more formal manner such concepts as imperfect competition increasing returns product differentiation and learning effects and by including the study of political and economic factors that shape trade policy decisions This collection of papers the result of a conference held by the NBER applies these new trade theories to existing world cases and also presents complementary empirical studies that are grounded in more traditional trade theories The volume is divided into four parts The papers in part 1 consider the problem of imperfect competition empirically assessing the economic effect of various trade policies introduced in industries in which the new trade theory seems to apply Those in part 2 isolate the effects of protection from the influences of the many economic changes that accompany actual periods of protection and also examine how the effects from exogenous changes in economic conditions vary with the form of protection Part 3 provides new empirical evidence on the effect of foreign production by a country s firms on the home country s exports Finally in part 4 two key bilateral issues are analyzed recent U S Japanese trade tensions and the incident involving the threat of the imposition of countervailing duties by the United States on Canadian softwood lumber

Business Environment and Firm Entry Leora Klapper, Luc Laeven, 2004 Using a comprehensive database of firms in Western and Eastern Europe we study how the business environment in a country drives the creation of new firms Our focus is on regulations governing entry We find entry regulations hamper entry especially in industries that naturally should have high entry Also value added per employee in naturally high entry industries grows more slowly in countries with onerous regulations on entry Interestingly regulatory entry barriers have no adverse effect on entry in corrupt countries only in less corrupt ones Taken together the evidence suggests bureaucratic entry regulations are neither benign nor welfare improving However not all regulations inhibit entry In particular regulations that enhance the enforcement of intellectual property rights or those that lead to a

better developed financial sector do lead to greater entry in industries that do more R D or industries that need more external finance **Quarterly Review of Military Literature** ,1941 **Review of Current Military Literature** ,1940
