Aircraft Design Mohammad H. Sadraey, 2012-11-20 A comprehensive approach to the air vehicle design process using the principles of systems engineering. Due to the high cost and the risks associated with development, complex aircraft systems have become a prime candidate for the adoption of systems engineering methodologies. This book presents the entire process of aircraft design based on a systems engineering approach from conceptual design phase through to preliminary design phase and to detail design phase. Presenting in one volume the methodologies behind aircraft design, this book covers the components and the issues affected by design procedures. The basic topics that are essential to the process such as aerodynamics, flight stability and control, aero structure and aircraft performance are reviewed in various chapters where required. Based on these fundamentals and design requirements, the author explains the design process in a holistic manner to emphasise the integration of the individual components into the overall design. Throughout the book, the various design options are considered and weighed against each other to give readers a practical understanding of the process overall. Readers with knowledge of the fundamental concepts of aerodynamics, propulsion, aero structure and flight dynamics will find this book ideal to progress towards the next stage in their understanding of the topic. Furthermore, the broad variety of design techniques covered ensures that readers have the freedom and flexibility to satisfy the design requirements when approaching real world projects. Key features: Provides full coverage of the design aspects of an air vehicle including aeronautical concepts, design techniques and design flowcharts. Features end of chapter problems to reinforce the learning process as well as fully solved design examples at component level. Includes fundamental explanations for aeronautical engineering students and practicing engineers. Features a solutions manual to sample questions on the book's companion website. Unmanned Aircraft Design Mohammad H. Sadraey, 2024-09-07 This book provides fundamental principles, design procedures and design tools for unmanned aerial vehicles (UAVs) with three sections focusing on vehicle design, autopilot design and ground system design. The design of manned aircraft and the design of UAVs have some similarities and some differences. They include the design process constraints e.g. g load, pressurization and UAV main components: autopilot, ground station, communications system, sensors and payload. A UAV designer must be aware of the latest UAV developments, current technologies, know

lessons learned from past failures and they should appreciate the breadth of UAV design options The contribution of unmanned aircraft continues to expand every day and over 67 countries are developing and employing UAVs for both military and civil scientific purposes A UAV system is much more than a reusable air vehicle or vehicles UAVs are air vehicles they fly like airplanes and operate in an airplane environment They are designed like air vehicles they have to meet critical air vehicle requirements A designer needs to know how to integrate complex multi disciplinary systems and to understand the environment the requirements and the design challenges and this book is an excellent overview of the fundamentals from an engineering perspective This book is meant to meet the needs of newcomers into the world of UAVs The materials are intended to provide enough information in each area and illustrate how they all play together to support the design of a complete UAV Therefore this book can be used both as a reference for engineers entering the field or as a supplementary text for a UAV design course to provide system level context for each specialized topic The second edition is extensively revised Some of the new terminologies concepts and specific unmanned aircraft systems are introduced The revisions make the book clearer and easier to understand and will add number of new subjects in areas that have become more prominent in the unmanned aviation world Aircraft Performance Mohammad H. Sadraey,2023-07-14 Aircraft Performance An Engineering Approach Second Edition introduces flight performance analysis techniques of fixed wing air vehicles particularly heavier than aircraft It covers maximum speed absolute ceiling rate of climb range endurance turn performance and takeoff run Enabling the reader to analyze the performance and flight capabilities of an aircraft by utilizing only the aircraft weight data geometry and engine characteristics this book covers the flight performance analysis for both propeller driven and jet aircraft The second edition features new content on vertical takeoff and landing UAV launch UAV recovery use of rocket engine as the main engine range for electric aircraft electric engine endurance for electric aircraft gliding flight pull up and climb turn In addition this book includes end of chapter problems MATLAB code and examples and case studies to enhance and reinforce student understanding This book is intended for senior undergraduate aerospace students taking courses in Aircraft Performance Flight Dynamics and Flight Mechanics Instructors will be able to utilize an updated Solutions Manual and Figure Slides for their course Airplane Design Jan Roskam,1985 Aircraft Control and Simulation Brian L. Stevens, Frank L. Lewis,2003-10-06 This second edition covers aerodynamics the control systems and the mathematics involved in analysing the performance of aircraft not only in the real world but also in computer simulated flight and gaming It includes new computer calculations in MatLab which is commonly used in the industry **Innovations in Defence Support Systems - 1** Anthony Finn,2010-07-15 Innovations in the area of Defence Support Systems are multi disciplinary cover a broad range of technologies and could not possibly be covered within a single volume This research book presents a sample of research as below On the Transition of Innovation and Technology in Defence Inserting Innovations In service Classification of Battlefield Ground Vehicles based on the Acoustic Emissions Convoy Movement Problem An Optimization
