Gwynne,2024-05-21 The tragic story of the British airship R101 which went down in a spectacular hydrogen fueled fireball in 1930 killing more people than died in the Hindenburg disaster seven years later has been largely forgotten In His Majesty s Airship historian S C Gwynne resurrects it in vivid detail telling the epic story of great ambition gone terribly wrong Airships those airborne leviathans that occupied center stage in the world in the first half of the twentieth century were a symbol of the future R101 was not just the largest aircraft ever to have flown and the product of the world s most advanced engineering she was also the lynchpin of an imperial British scheme to link by air the far flung areas of its empire from Australia to India South Africa Canada Egypt and Singapore No one had ever conceived of anything like this R101 captivated the world There was just one problem beyond the hype and technological wonders these big steel framed hydrogen filled airships were a dangerously bad idea Gwynne s chronicle features a cast of remarkable and often tragically flawed characters including Lord Christopher Thomson the man who dreamed up the Imperial Airship Scheme and then relentlessly pushed R101 to her destruction Princess Marthe Bibesco the celebrated writer and glamorous socialite with whom he had a long affair and Herbert Scott a national hero who had made the first double crossing of the Atlantic in any aircraft in 1919 eight years before Lindbergh s famous flight but who devolved into drink and ruin These historical figures and the ship they built flew and crashed come together in a grand tale that details the rocky road to commercial aviation written by one of the best popular historians writing today **Navy Department Appropriation Bill, 1929** United States. overcome the logistical challenges of polar exploration marking a distinctive intersection of technological advancement and geographical discovery The book argues that despite initial promise harsh environmental conditions ultimately limited the viability of polar airship exploration Examining key expeditions and figures like Umberto Nobile the narrative showcases human ambition alongside technical analysis of airship performance These case studies serve as a testament to both human endeavor and the limitations of early 20th century technology Progressing from the technological foundations of airship design to the analysis of major expeditions and their legacies the book synthesizes various historical sources including expedition logs and technical reports By connecting history of technology polar science and environmental history it offers a fresh perspective on this under explored area highlighting the complex relationship between human ambition and the natural world Hearings United States.
