Airways Smooth Muscle Structure Innervation And Neurotransmission:

Airways Smooth Muscle David Raeburn, Mark A. Giembycz, 2013-03-09 Many factors may influence the release of neurotransmitters from airway nerves 1 This is likely to be important in physiological control of airway functions and may be particularly relevant in airway diseases such as asthma and chronic obstructive pulmonary disease COPD Neural elements in airways interact in a complex manner and the activation of certain neural pathways may profoundly influence the release of transmitters from other neural pathways Similarly inflammatory mediators released from inflammatory cells in the airways may also modulate neurotransmitter release There are marked differences between species in airway innervation and in neuromodulatory effects and wherever possible studies in human airways have been emphasised although information on neuromodulation in human airways is somewhat limited at present Release of neurotransmitters from nerve terminals occurs via a Ca^{2+} dependent secretion evoked by a nerve action potential but may also be evoked experimentally by a high extracellular K^{+} concentration which directly depolarises the nerve terminal membrane Modulation refers to the alteration of neurotransmitter release which may either be increased facilitation or reduced inhibition by the action of a particular agent thus changing the magnitude of the neurally mediated response Such agents would normally act on receptors on the nerve terminal which are referred to as pre junctional or presynaptic receptors in contrast to post junctional or post synaptic receptors located on the target cells which are influenced by that particular transmitter

Cellular Mechanisms in Airways Inflammation Clive P. Page, Katharine H. Banner, Domenico Spina, 2013-03-11 Airways inflammation is a complex biological phenomenon resulting from the recruitment and activation of numerous cell types Airways inflammation contributes to the pathophysiology of airways disease An understanding of the mechanisms that regulate inflammatory cell function is essential for the development of novel anti inflammatory drugs for the treatment of common respiratory diseases such as asthma and COPD This book provides a collection of valuable reviews on the major inflammatory cells involved in airways disease and examines the pharmacology of current anti inflammatory drugs used in the treatment of airways disease Moreover an insight into the development of emerging drug therapies is also highlighted This book is a must for the library of any researcher or clinician interested in the pathophysiology of airways disease

Methods in Pulmonary Research Stefan Uhlig, Aubrey E. Taylor, 2012-12-06 Methods in Pulmonary Research presents a comprehensive review of methods used to study physiology and the cell biology of the lung The book covers the entire range of techniques from those that require cell cultures to those using in vivo experimental models Up to date techniques such as intravital microscopy are presented Yet standard methods such as classical short circuit techniques used to study tracheal transport are fully covered This book will be extremely useful for all who work in pulmonary research yet need a practical guide to incorporate other established methods into their research programs Thus the book will prove to be a valuable resource for cell biologists who wish to use organs in their research programs as well biological scientists who are moving their research programs into more cell related

phenomena *Nitric Oxide in Pulmonary Processes* Maria G. Belvisi, Jane A. Mitchell, 2012-12-06 Nitric oxide is an endogenously produced gas with a wide range of biological effects and has been implicated in many physiological and pathophysiological processes. It is released by many cell types in various organs but is particularly important in the maintenance of normal lung function. Nitric oxide in exhaled breath has been identified as a marker for lung disease in some patients. Thus it is appropriate to consider the lung separately for the role and functioning of nitric oxide. The authors identify key areas in the history, biochemistry, physiology, pathophysiology, immunology and clinical applications of nitric oxide in the lung. The contents of this book will be of particular importance to scientists and clinicians with an interest in lung disease. Moreover, the authors encompass state of the art opinions of and rationale for the therapeutic potential of nitric oxide and its inhibitors.

Nitric Oxide and Free Radicals in Peripheral Neurotransmission Stanley Kalsner, 2012-12-06 Nitric Oxide and Free Radicals in Peripheral Neurotransmission is a welcome addition to the literature and describes current research into the role of nitric oxide in the peripheral nervous system and its associated organs. Topics covered range from general consideration of nitrergic transmission in its broadest sense to elaboration of our current understanding of the role of nitric oxide in transmission in individual peripheral organs including its role as a backup or alternate as well as chief transmitter. The influence of nitric oxide and related compounds on the more conventional modes of autonomic transmission are also considered. Aimed at students and researchers in the areas of neuroscience and physiology. Nitric Oxide and Free Radicals in Peripheral Neurotransmission also covers the emerging role of abnormal nitric oxide function in disease states and where appropriate as potential avenues of therapy.

Airway Mucus: Basic Mechanisms and Clinical Perspectives D.F. Rogers, Michael Lethem, 1997-09-23 Conceptually unsavoury airway mucus is vital to homeostasis in the respiratory tract. In contrast when abnormal mucus contributes significantly to the pathophysiology of a number of severe bronchial diseases including asthma, chronic bronchitis and cystic fibrosis. This volume provides wide ranging and in depth coverage of the scientific and clinical aspects of airway mucus. It commences with introductory chapters which address the biochemical and molecular biological basis of airway mucus and continues with comprehensive coverage of the various physiological and rheological aspects of respiratory secretions. The clinical aspects of the topic are then considered with chapters discussing the involvement of mucus secretions in bacterial infection and in hypersecretory diseases of the airway. The volume concludes with a discussion of the therapeutic aspects of the topic both in terms of the possible approaches to the treatment of mucus hypersecretion and the interaction of these drugs with airway mucus. Written by leading experts in the field each contribution provides a comprehensive review of its particular subject. Reflecting the latest advances in this important area of respiratory research this volume will be of great interest to scientists and clinicians working in the field of airway secretions and related areas.

Muscarinic Receptors in Airways Diseases Johan Zaagsma, Herman Meurs, Ad F. Roffel, 2013-03-08 What are the different muscarinic acetylcholine receptor subtypes and how are they distributed in the airways and molecular signalling

mechanisms What is their function in neurogenic and non neurogenic control of the airways and in inflammatory mechanisms How is their gene expression regulated The great importance of muscarinic acetylcholine receptors for the pathophysiology and treatment of chronic inflammatory obstructive airways diseases calls for a comprehensive and integrated overview of the current knowledge to address such questions to discuss the role of these receptor subtypes in diseases such as asthma and COPD and to present novel perspectives on antimuscarinic drug development The present book is the worthy result of this need It points out innovative insights into the hitherto poorly understood role of postjunctional muscarinic M2 receptors in airway smooth muscle contraction and sheds some light on the novel concepts of antimuscarinic drug development with special reference to the l **Gastroesophageal Reflux Disease and Airway Disease** Mark R. section on Asthma in Special Circumstances includes chapters on asthma in pregnancy asthma and surgery asthma in the elderly and asthma in the context of critical care In bringing the Second Edition fully up to date the book has inevitably increased in size and is now presented in two volumes The second edition of Asthma and Rhinitis will continue the tradition of its predecessor of providing an up to the minute reference for all those involved in the management of and research into asthma and rhinitis *Airways Smooth Muscle: Development, and Regulation of Contractility* David Raeburn, Mark A. Giembycz, 2013-03-08 Most studies on autonomic innervation of smooth muscle have focused on the short term mechanisms involved in neurotransmission in physiological and pathophysiological conditions However recent observations of the long term plasticity of this system i e its capacity for regeneration and for compensatory change in pattern of innervation and expression of cotransmitters and receptors in ageing following surgery trauma or in disease have indicated that an understanding of the mechanisms involved could influence the design of therapeutic regimes There is increasing evidence for long term communication between nerves and smooth muscle cells during development and throughout adult life To date the trophic interactions between nerves and airway musculature have attracted little interest consequently much of the information presented here is drawn from studies using other smooth muscles However the questions posed about trophic interactions during development apply as much to airways smooth muscle neuroeffector systems as to other autonomic neuroeffector systems These are i How do developing nerve fibres know where to go and how do they reach their target sites ii What determines the density and pattern of innervation at reaching the effector iii How do the nerves survive and maintain their position once established iv What factors influence neurochemical differentiation such that genetically multipotential neurones are triggered to synthesize one or combinations of neurotransmitters v What influence do nerves have on the structure function and receptor expression of their effector cells vi How do diseases interrupt these processes see 1
