Identification of Biomarkers for Cancer Immunotherapy: From Bench to Bedside, volume I Chang Gu, Qingyuan Huang, Haoran Liu, Amr Ahmed El-Arabey, 2023-10-20 During the past few decades immunotherapy has become an established pillar of cancer treatment improving the survival of numerous patients with diverse solid and hematologic tumors The leading causes behind the success are the discovery of immune checkpoint inhibitors ICIs and the development of chimeric antigen receptor CAR T M NK cells As for ICIs malignancies take advantage of the inhibitory programmed cell death protein 1 programmed cell death protein ligand 1 PD 1 PD L1 or cytotoxic T lymphocyte associated protein CTLA 4 pathways to evade the immune system and disruption of the axis by immune checkpoint inhibitors can achieve durable disease remissions which has been proved by basic researches and pre clinical studies among lung cancer melanoma renal cell cancer head and neck squamous cell carcinoma urothelial cancer and Hodgkin s disease However the 5 year survival rate of patients treated with ICIs varies with each individual and also relies on tumor specific pathological or molecular subtypes Besides the efficacy of ICIs is still limited in terms of drug resistance and fewer potential responders Thus there is a big challenge to identify and develop more novel reliable ICIs as well as sensitize existing ICIs for patients with drug resistance or even for non responders

Sustainable Solid Waste Collection and Management Ana Pires, Graça Martinho, Susana Rodrigues, Maria Isabel Gomes, 2018-09-20

This volume focuses on the collection of waste and waste streams as an integral aspect of sustainable waste management. The authors take economic models and behavioral studies into account to go beyond just descriptions of waste collection technologies and collection route design. Models and tools for sustainable waste collection are described in detail and the authors provide a comprehensive integrated methodology to design waste collection systems that reduce environmental impacts, are economically viable, and achieve buy in and participation from target populations. Part I of the book provides fundamentals and context on waste hierarchy including waste prevention, reduction, and reuse; waste collection itself and steps such as preparation for recycling, recycling treatment, and landfilling. Background in environmental, social, and economic concerns surrounding waste collection is also provided here. Part II addresses tools for design, operation, and maintenance of waste collection systems. Part III focuses on how the tools presented in Part II can be used to support sustainability assessments and decisions that consider the entire life cycle of waste and the role of waste collection programs in waste prevention, reduction, reuse, recycling, treatment, and disposal. Part IV addresses the challenges of developing sustainable waste management systems and addresses the role of waste collection in sustainable waste management in the future.

Projection Displays Matthew S. Brennesoltz, Edward H. Stupp, 2008-09-15

Projection is a technology for generating large high resolution images at a price point end users can afford. This allows it to be used in a wide variety of large screen markets such as television and cinema. In addition, there are emerging small screen markets where a pocketable miniaturized projector can display images from mobile information devices such as smart phones or portable media players. Fully revised, this second edition of *Projection Displays* provides up to date coverage of the optical and mechanical systems in electronic projection displays. It takes into account major new developments in the many technologies needed to manufacture a projector display system. It presents a comprehensive review of projector architectures, systems, components, and devices. Key new and updated features include new material on light sources for projection displays, updated information on the human factors of projection displays including color gamuts, resolution, and speckle coverage of new image generating systems including LCOS and scanned laser systems, up to date information on front and rear projection screens, practical examples of projection display applications, models for predicting the performance of optical and mechanical systems. This book is aimed at practicing engineers and researchers involved in the research, development, design, and manufacture of projection displays. It includes key aspects from the many technologies contributing to projection systems such as illumination sources, optical design, electronics, semiconductor design, microdisplay systems, and mechanical engineering. The book will also be of interest to graduate students taking courses in display technology and imaging science, as well as students of the many other engineering, physics, and optics disciplines that lead into the field of projection displays.
