Heiberger, Burt Holland, 2013-06-29 1 Audience Students seeking master's degrees in applied statistics in the late 1960s and 1970s typically took a year long sequence in statistical methods Popular choices of the course text book in that period prior to the availability of high speed computing and graphics capability were those authored by Snedecor and Cochran and Steel and Torrie By 1980 the topical coverage in these classics failed to include a great many new and important elementary techniques in the data analyst's toolkit In order to teach the statistical methods sequence with adequate coverage of topics it became necessary to draw material from each of four or five text sources Obviously such a situation makes life difficult for both students and instructors In addition statistics students need to become proficient with at least one high quality statistical software package This book can serve as a standalone text for a contemporary year long course in statistical methods at a level appropriate for statistics majors at the master's level or other quantitatively oriented disciplines at the doctoral level The topics include both concepts and techniques developed many years ago and a variety of newer tools not commonly found in textbooks *Books and Pamphlets, Including Serials and Contributions to Periodicals* Library of Congress.
