Berger Jr University of California Santa Cruz Nuremberg, a Renaissance City, 1500–1618 Jeffrey Chipps Smith, 2014-12-15 This illustrated study of Renaissance Nuremberg explores the city's social and artistic history through the sixteenth century and beyond. The German city of Nuremberg reached the height of its artistic brilliance during the Renaissance, becoming one of the foremost cultural centers in all of Europe by 1500. Nuremberg was the home of painter Albrecht Dürer, whose creative genius inspired generations of German artists. However, Dürer was only one of a host of extraordinary painters, printmakers, sculptors, and goldsmiths working in the city. Following a map of the city's principal landmarks, Guy Fitch Lytle provides a compact historical background for Jeffrey Chipps Smith's detailed discussions of the city's social and artistic significance. Smith examines the religious function of art before and during the Reformation, the early manifestations of humanism in Nuremberg, and its influence on the art of Dürer and his contemporaries, and the central role of Dürer's pedagogical ideas and his workshop in the dissemination of Renaissance artistic concepts. Finally, Smith surveys the principal artists and stylistic trends in Nuremberg from 1500 to the outbreak of the Thirty Years War. *Nuremberg: A Renaissance City, 1500–1618* contains biographical sketches of forty-five major artists of the period, plus more than three hundred illustrations depicting the city and its most magnificent artistic treasures.

Perspective, Projections and Design Mario Carpo, Frédérique Lemerle, 2013-04-15 The essays selected for this book, presented in chronological order, discuss various aspects of image-making technologies, geometrical knowledge, and tools for architectural design, focusing in particular on two historical periods marked by comparable patterns of technological and cultural change. The first is the Renaissance, characterized by the rediscovery of linear perspectives and the simultaneous rise of new formats for architectural drawing and design on paper; the second, the contemporary rise of digital technologies and the simultaneous rise of virtual reality and computer-based design and manufacturing. Many of the contributing authors explore the parallel between the invention of the perspectival paradigm in early modern Europe and the recent development of digitized virtual reality. This issue, in turn, bears on the specific purposes of architectural design, where various representational tools and devices are used to visualize bi-dimensional aspects of objects that must be measured and eventually built in three-dimensional space.

The Cambridge History of Literary Criticism: Volume 3, The Renaissance George Alexander Kennedy, Glyn P. Norton, 1989 This 1999 volume was the first to explore, as part of an unbroken continuum, the critical legacy both of the humanist rediscovery of ancient learning and of its neoclassical reformulation. Focused on what is arguably the most complex phase in the transmission of the Western literary critical heritage, the book encompasses those issues that helped shape the way European writers thought about literature from the late Middle Ages to the late seventeenth century. These issues touched almost every facet of Western intellectual endeavour, as well as the historical, cultural, social, scientific, and technological contexts in which that activity evolved. From the interpretative reassessment of the major ancient poetic texts, this volume addresses the emergence of the literary critic in Europe by exploring poetics, prose, fiction, contexts of

criticism neoclassicism and national developments Sixty one chapters by internationally respected scholars are supported by an introduction detailed bibliographies for further investigation and a full index
