Alchemy As An Experimental Art:

Alchemy in Contemporary Art Urszula Szulakowska, 2017-07-05 Alchemy in Contemporary Art analyzes the manner in which twentieth century artists beginning with French Surrealists of the 1920s have appropriated concepts and imagery from the western alchemical tradition This study examines artistic production from c 1920 to the present with an emphasis on the 1970s to 2000 discussing familiar names such as Andre Breton Salvador Dali Yves Klein Joseph Beuys and Anselm Kiefer as well as many little known artists of the later twentieth century It provides a critical overview of the alchemical tradition in twentieth century art and of the use of occultist imagery as a code for political discourse and polemical engagement The study is the first to examine the influence of alchemy and the Surrealist tradition on Australian as well as on Eastern European and Mexican art In addition the text considers the manner in which women artists such as Leonora Carrington Remedios Varo and Rebecca Horn have critically revised the traditional sexist imagery of alchemy and occultism for their own feminist purposes *The Story of Alchemy and the Beginnings of Chemistry* M. Since 1900 the connections between art and technology with nature have become increasingly inextricable Through a selection of innovative readings by international scholars this book presents the first investigation of the intersections between art technology and nature in post medieval times Transdisciplinary in approach this volume's 14 essays explore art technology and nature's shifting constellations that are discernible at the micro level and as part of a larger chronological pattern Included are subjects ranging from Renaissance wooden dolls science in the Italian art academies and artisanal epistemologies in the followers of Leonardo to Surrealism and its precursors in Mannerist grotesques and the Wunderkammer eighteenth century plant printing the climate and its artistic presentations from Constable to Olafur Eliasson and the hermeneutics of bioart In their comprehensive introduction editors Camilla Skovbjerg Paldam and Jacob Wamberg trace the Kantian heritage of radically separating art and technology and inserting both at a distance to nature suggesting this was a transient chapter in history Thus they argue the present renegotiation between art technology and nature is reminiscent of the ancient and medieval periods in which art and technology were categorized as aspects of a common area of cultivated products and their methods the Latin *ars* the Greek *techne* an area moreover supposed to imitate the creative forces of nature

Texts and Contexts in Ancient and Medieval Science Edith Sylla, Michael R. McVaugh, 1997-06-01 These studies respond to the challenge posed twenty years ago by John E Murdoch in whose honor they have been assembled to interpret ancient and medieval mathematical and scientific texts not just as isolated intellectual productions but as responses to particular settings or contexts Two broad settings are explored here that of the wider intellectual culture where relations among mathematics astronomy natural philosophy and also theology logic and astrology are shown to have shaped individual texts and the context of lay society where institutional structures patronage even personal relationships impinged upon scientific writing The volume reinforces the growing recognition that ancient and medieval scientific texts made a difference to their authors and audiences and must be understood in relation to topics like disciplinary identity career advancement lay interest and practical applicability Publications by John E Murdoch Edited by Christoph L thy John E Murdoch and William R Newman Late Medieval and Early Modern Corpuscular Matter Theories ISBN 978 90 04 11516 3

Estonian Studies in the History and Philosophy of Science Rein Vihalemm, 2012-12-06 The development of geography also forms an interesting chapter in the history of the University of Tartu and in that of Estonian science in general On the one hand geography is a natural science in the broader sense of the word on the other hand it is a study of human activity This status of geography makes it particularly sensitive to the cultural and political circumstances under which scholarship and science have developed in Estonia The article by Professor of Human Geography Ott Kurs born 1939 and historian of science PhD in geography Erki Tamrniksaar born 1969 In Political Draughts Between Science and the Humanities Geography at the University of Tartu Between the 17 20 Centuries is devoted to this topic Among other

things the article states that regular instruction in geography started at the University of Tartu in 1826 when the second chair of geography in Europe was established here Although the present book does not contain any studies on philosophy at th Tartu University in the 19 century I would still like to mention two names th In the early 19 century I Kant s philosophy was dominant at Tartu Uni versity One of Kant s pupils Gottlob Benjamin Jasche 1762 1839 who had worked under him as a Privatdozent in Konigsberg served as a professor here from 1802 1839 In the history of philosophy he is primarily known as the publisher of Kant s Logic

Laboratories of Art Sven Dupré, 2014-04-25 This book explores the interconnections and differentiations between artisanal workshops and alchemical laboratories and between the arts and alchemy from Antiquity to the eighteenth century In particular it scrutinizes epistemic exchanges between producers of the arts and alchemists In the fifteenth and sixteenth centuries the term laboratorum uniquely referred to workplaces in which chemical operations were performed smelting combustion distillation dissolution and precipitation Artisanal workshops equipped with furnaces and fire in which chemical operations were performed were also known as laboratories Transmutational alchemy the transmutation of all base metals into more noble ones especially gold was only one aspect of alchemy in the early modern period The practice of alchemy was also about the chemical production of things medicines porcelain dyes and other products as well as precious metals and about the knowledge of how to produce them This book uses examples such as the Uffizi to discuss how Renaissance courts established spaces where artisanal workshops and laboratories were brought together thus facilitating the circulation of materials people and knowledge between the worlds of craft today s decorative arts and alchemy Artisans became involved in alchemical pursuits beyond a shared material culture and some crafts relied on chemical expertise offered by scholars trained as alchemists Above all texts and books products and symbols of scholarly culture played an increasingly important role in artisanal workshops In these workplaces a sort of hybrid figure was at work With one foot in artisanal and the other in scholarly culture this hybrid practitioner is impossible to categorize in the mutually exclusive categories of scholar and craftsman By the seventeenth century the expertise of some glassmakers silver and goldsmiths and producers of porcelain was just as based in the worlds of alchemical and bookish learning as it was grounded in hands on work in the laboratory This book suggests that this shift in workshop culture facilitated the epistemic exchanges between alchemists and producers of the decorative arts
