leading edge of computer science research is notoriously ckle New trends come and go with alarming and unfailing regularity In such a rapidly changing eld the fact that research interest in a subject lasts more than a year is worthy of note The fact that after ve years interest not only remains but actually continues to grow is highly unusual As 1998 marked the fth birthday of the International Workshop on Agent Theories Architectures and Languages ATAL it seemed appropriate for the organizers of the original workshop to comment on this remarkable growth and re ect on how the eld has developed and matured The rst ATAL workshop was co located with the Eleventh European Conference on Arti cial Intelligence ECAI 94 which was held in Amsterdam The fact that we chose an AI conference to co locate with is telling at that time we expected most researchers with an interest in agents to come from the AI community The workshop which was planned over the summer of 1993 attracted 32 submissions and was attended by 55 people ATAL was the largest workshop at ECAI 94 and the clear enthusiasm on behalf of the community made the decision to hold another ATAL workshop simple The ATAL 94 proceedings were formally published in January 1995 under the title Intelligent Agents and included an extensive review article a glossary a list of key agent systems and unusually for the proceedings of an academic workshop a full subject index The high scienti cand production values embodied by the ATAL 94 proceedings appear to have been recognized by the community and resulted in ATAL proceedings being the most successful sequence of books published in Springer Verlag s Lecture Notes in Arti cial Intelligence series

Agent-Oriented Information Systems II Paolo Bresciani, Paolo Giorgini, Brian Henderson-Sellers, Graham Low, Michael Winikoff, 2005-05-10 Information systems have become the backbone of all kinds of organizations day In almost every sector manufacturing education health care government and businesses large and small information systems are relied upon for eryday work communication information gathering and decision making Yet the in exibilities in current technologies and methods have also resulted in poor performance incompatibilities and obstacles to change As many organizations are reinventing themselves to meet the challenges of global competition and e commerce there is increasing pressure to develop and deploy new technologies that are exible robust and responsive to rapid and unexpected change Agent concepts hold great promise for responding to the new realities of formation systems They o er higher level abstractions and mechanisms which address issues such as knowledge representation and reasoning communication coordination cooperation among heterogeneous and autonomous parties p ception commitments goals beliefs intentions etc all of which need conc tual modelling On the one hand the concrete implementation of these concepts can lead to advanced functionalities e g in inference based query answering transaction control adaptive work ows brokering and integration of disparate information sources and automated communication processes On the other hand their rich representational capabilities allow for more faithful and ible treatments of complex organizational processes leading to more e ective requirements analysis and architectural detailed design
