Merelo-Guervós, L. Darrell Whitley, Xin Yao, 2006-10-06 This book constitutes the refereed proceedings of the 9th International Conference on Parallel Problem Solving from Nature PPSN 2006 The book presents 106 revised full papers covering a wide range of topics from evolutionary computation to swarm intelligence and bio inspired computing to real world applications. These are organized in topical sections on theory new algorithms applications multi-objective optimization evolutionary learning as well as representations operators and empirical evaluation The Economics of Risk and Time Christian Gollier, 2001 Updates and advances the theory of expected utility as applied to risk analysis and financial decision Rapid Contextual Design Karen Holtzblatt, Jessamyn Burns Wendell, Shelley Wood, 2004-12-31 Is it impossible to schedule enough time to include users in your design process Is it difficult to incorporate elaborate user centered design techniques into your own standard design practices Do the resources needed seem overwhelming This handbook introduces Rapid CD a fast paced adaptive form of Contextual Design Rapid CD is a hands on guide for anyone who needs practical quidance on how to use the Contextual Design process and adapt it to tactical projects with tight timelines and resources Rapid Contextual Design provides detailed suggestions on structuring the project and customer interviews conducting interviews and running interpretation sessions. The handbook walks you step by step through organizing the data so you can see your key issues along with visioning new solutions storyboarding to work out the details and paper prototype interviewing to iterate the design all with as little as a two person team with only a few weeks to spare Includes real project examples with actual customer data that illustrate how a CD project actually works Covers the entire scope of a project from deciding on the number and type of interviews to interview set up and analyzing collected data Sample project schedules are also included for a variety of different types of projects Provides examples of how to write affinity notes and affinity labels build an affinity diagram and step by step instructions for consolidating sequence models Shows how to use consolidated data to define a design within tight time frames with examples of visions storyboards and paper prototypes Introduces CDToolsTM the first application designed to support customer centered design **Advances and Trends in Artificial** Intelligence. Theory and Applications Hamido Fujita, Yutaka Watanobe, Moonis Ali, Yinglin Wang, 2025-08-01 This book constitutes the refereed proceedings of the 38th International Conference on Industrial Engineering and Other Applications of Applied Intelligent Systems on Advances and Trends in Artificial Intelligence IEA AIE 2025 held in Kitakyushu Japan in July 1 4 2025 The 80 full papers and 9 short papers included in this book were carefully reviewed and selected from 130 submissions They focus on the following topical sections Part I Reinforcement Learning Optimization Natural Language Processing Multi Agent Machine Learning and Decision Making Knowledge Representation Data Engineering Large Language Model Computer Vision Part II Robotics Education Cyber Security Healthcare and Medical Applications Advanced Applied Intelligence Methodologies and Applications Intelligent Systems and e Applications Industrial and Engineering **Applications Swarm Intelligence Algorithms** Adam Slowik,2020-08-25 Nature based algorithms play an important role

among artificial intelligence algorithms Among them are global optimization algorithms called swarm intelligence algorithms These algorithms that use the behavior of simple agents and various ways of cooperation between them are used to solve specific problems that are defined by the so called objective function Swarm intelligence algorithms are inspired by the social behavior of various animal species e g ant colonies bird flocks bee swarms schools of fish etc The family of these algorithms is very large and additionally includes various types of modifications to enable swarm intelligence algorithms to solve problems dealing with areas other than those for which they were originally developed This book presents 24 swarm algorithms together with their modifications and practical applications Each chapter is devoted to one algorithm It contains a short description along with a pseudo code showing the various stages of its operation In addition each chapter contains a description of selected modifications of the algorithm and shows how it can be used to solve a selected practical problem This book should also be useful for undergraduate and postgraduate students studying nature based optimization algorithms and can be a helpful tool for learning these algorithms along with their modifications and practical applications. In addition it can be a useful source of knowledge for scientists working in the field of artificial intelligence as well as for engineers interested in using this type of algorithms in their work If the reader wishes to expand his knowledge beyond the basics of swarm intelligence algorithms presented in this book and is interested in more detailed information we recommend the book Swarm Intelligence Algorithms A Tutorial Edited by A Slowik CRC Press 2020 It contains a detailed explanation of how each algorithm works along with relevant program codes in Matlab and the C programming language as well as numerical examples illustrating step by step how individual algorithms work Intelligent Problem Solving. Methodologies and Approaches Rasiah Logananthara, Günther Palm, Moonis Ali, 2000-06-07 The focus of the papers presented in these proceedings is on employing various methodologies and approaches for solving real life problems Although the mechanisms that the human brain employs to solve problems are not yet completely known we do have good insight into the functional processing performed by the human mind On the basis of the understanding of these natural processes scientists in the field of applied intelligence have developed multiple types of artificial processes and have employed them successfully in solving real life problems. The types of approaches used to solve problems are dependant on both the nature of the problem and the expected outcome While knowledge based systems are useful for solving problems in well understood domains with relatively stable environments the approach may fail when the domain knowledge is either not very well understood or changing rapidly The techniques of data discovery through data mining will help to alleviate some problems faced by knowledge based approaches to solving problems in such domains Research and development in the area of artificial intelligence are influenced by opportunity needs and the availability of resources The rapid advancement of Internet technology and the trend of increasing bandwidths provide an opportunity and a need for intelligent information processing thus creating an excellent opportunity for agent based computations and learning Over 40% of the papers appearing in the conference
