Age-related Factors In Radionuclide Metabolism And Dosimetry

William C. Dewey

Agerelated Factors In Radionuclide Metabolism And Dosimetry:

Age-Related Factors in Radionuclide Metabolism and Dosimetry G.B. Gerber,H. Métivier,H. Smith,1987-07-31
Proceedings of a Workshop Held in Angers France November 26 28 1986 Sponsored by the Commission of the European
Communities Directorate General for Science Research and Development *Age-dependent Factors in the Biokinetics and
Dosimetry of Radionuclides* Georg B. Gerber,D. M. Taylor,J. W. Stather,1992 **Congress Proceedings** William C.
Dewey,Martha Edington,Michael Fry,2013-10-02 Congress Proceedings **Energy Research Abstracts** ,1988

Toxicological Profile for Uranium ,1997 **Theoretical and Mathematical Foundations of Human Health Risk
Analysis** Douglas J. Crawford-Brown,2012-12-06 Scientists and regulators have struggled to define the role of theory
experiments models and common sense in risk analysis This situation has been made worse by the isolation of theory from
modeling of experimentation from theory and of practical action from basic science This book arises from efforts at
regulatory agencies and industries to bring more science into health risk analysis so that society may better use limited
resources to improve public health This book covers the characterization of exposure to pollutants and other sources of risk
the movement of pollutants into the body via inhalation ingestion dermal absorption and exposures to radiation the
movement of a pollutant as it cascades through the tissues and organs of the body and the development of principles and
models for dose response modeling The book shows how an understanding of the biological chemical and physical properties
of the environment and of the human body can guide the selection of mathematical models and how these models can aid in
estimating risks Included in the book are models covering the full range of topics in human health risk analysis exposure
assessment rates of intake deposition and uptake by organs absorption across membranes biokinetics dosimetry and dose
response The reader will gain from the book a better understanding of how environmental health science as applied in risk
analysis can be used to create a more rational basis for the improvement of public health **National Library of Medicine
Current Catalog** National Library of Medicine (U.S.),1988 Internal Dosimetry of Radionuclides J. W. Stather,2003

Advanced Radiation Protection Dosimetry Shaheen Dewji,Nolan E. Hertel,2019-04-02 Although many radiation protection
scientists and engineers use dose coefficients few know the origin of those dose coefficients This is the first book in over 40
years to address the topic of radiation protection dosimetry in intimate detail Advanced Radiation Protection Dosimetry
covers all methods used in radiation protection dosimetry including advanced external and internal radiation dosimetry
concepts and regulatory applications This book is an ideal reference for both scientists and practitioners in radiation
protection and students in graduate health physics and medical physics courses Features A much needed book filling a gap in
the market in a rapidly expanding area Contains the history evolution and the most up to date computational dosimetry
models Authored and edited by internationally recognized authorities and subject area specialists Interrogates both the
origins and methodologies of dose coefficient calculation Incorporates the latest international guidance for radiation

dosimetry and protection *International Journal of Radiation Biology and Related Studies in Physics, Chemistry and Medicine*, 1991 *Radioiodination: Theory, Practice, and Biomedical Applications* Mrinal K. Dewanjee, 2012-12-06 Among the readily available emitting radionuclides the nuclides of iodine have the greatest versatility in labeling both the hydrophilic and the lipophilic compounds that are used in biology and medicine Biologically important micromolecules semimacromolecules and macromolecules have been identified which after iodination almost maintain the same molecular configuration and similar biologic specificity as those of the parent molecules The multiple techniques for iodination and the clinical use of iodinated products have made possible the present status of the development of diagnostic nuclear medicine ^{125}I with a half life of 60 days has a crucial role in competitive protein binding studies ^{131}I is useful for measuring thyroid uptake for the diagnosis of thyroid carcinoma and metastasis and for therapy ^{123}I with a reasonably shorter half life is almost ideal for thyroid workup and for a few useful labeled radiopharmaceutical Although ^{123}I is used more widely in diagnostic procedures the radionuclides of iodine will always have a major role in biology and medicine A considerable amount of information is scattered in the literature regarding the chemistry of radioiodination and the mechanism of tracer localization in cells and tissues Labeled peptides proteins and antibodies are extensively used for protein turnover studies receptor binding and tumor imaging studies and radioimmunoassay The general trend in the use of tracers in clinical nuclear medicine has been an evolution from ^3H ^{14}C ^{11}C and ^{13}C to ^{125}I ^{131}I and ^{123}I to ^6C and $^{11}\text{m}\text{In}$ International Journal of Radiation Biology, 1993 **The Risk of Childhood Leukaemia Near Nuclear Establishments** J. Stöcklin, V.W.

Pike,2012-12-06 Radiochemical methodology constitutes the most important base for the successful functioning of a PET group in the routine production and development of radiopharmaceuticals Of the several hundred products which have been labelled with positron emitters during the past two decades about 35 are presently considered to be of major interest The time for a state of the art review is right since this field has advanced over the past fifteen years to reach a level where guidelines can now be suggested Chapters of this book deal with each of the main methodological aspects of the chemistry needed to develop an effective radiopharmaceutical namely radionuclide production automation and metabolite analysis A further chapter on QA QC is written by a broadly based expert group and is meant to provide a guideline and a base for future monographs and regulations on major PET radiopharmaceuticals of today This book will help the increasing numbers of scientists who are now entering the field of PET to appreciate the methodological aspects that are normally addressed by chemists in relation to PET radiopharmaceuticals it provides many useful practical guidelines and will promote early success in their own endeavours since these will often necessarily begin by establishing chemical methodology of the kind discussed here
