Ages Of Gaia A Biography Of Our Living Earth:

The Ages of Gaia James Lovelock, 2000 Since James Lovelock's first book *Gaia* was published much scientific work has confirmed his theory that the Earth and all living things are part of one great organism. *The Ages of Gaia* looks at this evidence in detail and has been updated and revised throughout in this second edition. In his discussion of scientific and environmental issues he sounds a warning of the damage man is doing to the health of the planet. **The Ages of Gaia** James Lovelock, J. E. Lovelock, 1995 James Lovelock proposes that all living species are components of that organism as cells are components of the human body. *Understanding Gregory Bateson* Noel G. Charlton, 2010-03-25 Gregory Bateson 1904-1980 anthropologist, psychologist, systems thinker, student of animal communication and insightful environmentalist was one of the most important holistic thinkers of the twentieth century. Noel G. Charlton offers this first truly accessible introduction to Bateson's work, distilling and clarifying Bateson's understanding of the mind or mental systems as being present throughout the living Earth in systems and creatures of all kinds. Part biography, part overview of the evolution of his ideas, Charlton's book situates Bateson's thought in relation to that of other ecological thinkers. This long-awaited volume opens up this challenging thinker's body of work and introduces it to a new generation of readers. **Earth, Our Living Planet** Philippe Bertrand, Louis Legendre, 2021-04-21 Earth is to our knowledge the only life-bearing body in the Solar System. This extraordinary characteristic dates back almost 4 billion years. How to explain that Earth is teeming with organisms and that this has lasted for so long? What makes Earth different from its sister planets Mars and Venus? The habitability of a planet is its capacity to allow the emergence of organisms. What astronomical and geological conditions concurred to make Earth habitable 4 billion years ago and how has it remained habitable since? What have been the respective roles of non-biological and biological characteristics in maintaining the habitability of Earth? This unique book answers the above questions by considering the roles of organisms and ecosystems in the Earth System, which is made of the non-living and living components of the planet. Organisms have progressively occupied all the habitats of the planet, diversifying into countless life forms and developing enormous biomasses over the past 3.6 billion years. In this way, organisms and ecosystems took over the Earth System and thus became major agents in its regulation and global evolution. There was co-evolution of the different components of the Earth System, leading to a number of feedback mechanisms that regulated long-term Earth conditions. For millennia, and especially since the Industrial Revolution nearly 300 years ago, humans have gradually transformed the Earth System. Technological developments combined with the large increase in human population have led in recent decades to major changes in the Earth's climate, soils, biodiversity, and quality of air and water. After some successes in the 20th century at preventing internationally environmental disasters, human societies are now facing major challenges arising from climate change. Some of these challenges are short-term, and others concern the thousand-year evolution of the Earth's climate. Humans should become the stewards of Earth. Kong, Godzilla and the Living Earth Allen A. Debus, 2022-06-24 During the

2010s science fiction's immortal adversaries King Kong and Godzilla representing our conflicts per Carl Sagan's dream dragons analogy made comebacks in American cinema. The blockbuster Kaiju resurged onto the screen depicting these protectors of an Earth plagued by mankind's hubris and folly. With Earth's future hanging in the balance, their climactic 2021 staging settled a score between the two giant monsters, resolving Toho's classic 1963 film King Kong vs Godzilla. As formidable creatures emerging from Time's Tomb on Mother Earth, metaphorical Kong and Godzilla are considered here in light of new millennial environmentalism's stark reality. This book, nostalgic in tone, explores the meaning of Kong and Godzilla as planetary saviors, titanic protectors of a theoretical living Earth, Gaia, defending the globe from a prehistoric plague of adversaries.

Early Earth Systems Hugh R. Rollinson, 2009-03-12 Early Earth Systems provides a complete history of the Earth from its beginnings to the end of the Archaean. This journey through the Earth's early history begins with the Earth's origin, then examines the evolution of the mantle, the origin of the continental crust, the origin and evolution of the Earth's atmosphere and oceans, and ends with the origin of life. Looks at the evidence for the Earth's very early differentiation into core, mantle, crust, atmosphere, and oceans, and how this differentiation saw extreme interactions within the Earth system. Discusses Archaean Earth processes within the framework of the Earth System Science paradigm, providing a qualitative assessment of the principal reservoirs and fluxes in the early Earth. The book would be perfect for a graduate level or upper level undergraduate course on the early Earth. It will also serve as a great starting point for researchers in solid Earth geochemistry who want to know more about the Earth's early atmosphere and biosphere, and vice versa for low temperature geochemists who want to get a modern overview of the Earth's interior. Science Fact and Science Fiction Brian M. Stableford, 2006 Publisher description

Representing Beasts in Early Medieval England and Scandinavia Michael D. J. Bintley, Thomas J. T. Williams, 2015 Essays on the depiction of animals, birds, and insects in early medieval material culture, from texts to carvings to the landscape itself. For people in the early Middle Ages, the earth, air, water, and ether teemed with other beings. Some of these were sentient creatures that swam, flew, slithered, or stalked through the same environments inhabited by their human contemporaries. Others were objects that a modern beholder would be unlikely to think of as living things but could yet be considered to possess a vitality that rendered them potent. Still others were things half glimpsed on a dark night or seen only in the mind's eye: strange beasts that haunted dreams and visions or inhabited exotic lands beyond the compass of everyday knowledge. This book discusses the various ways in which the early English and Scandinavians thought about and represented these other inhabitants of their world and considers the multifaceted nature of the relationship between people and beasts. Drawing on the evidence of material culture, art, language, literature, place names, and landscapes, the studies presented here reveal a world where the boundaries between humans, animals, monsters, and objects were blurred and often permeable, and where to represent the bestial could be to hold a mirror to the self. Michael D. J. Bintley is Senior Lecturer in Medieval Literature at Canterbury Christ Church University. Thomas J. T.
