Aggression And Evolution:

Aggression and Evolution ,1973 **The Evolution of Violence** Todd K. Shackelford,Ranald D. Hansen,2013-11-09

This volume is an interdisciplinary exploration of our understanding of the causes and consequences of violence Represented in its chapters are noted scholars from a variety of fields including psychology anthropology law and literature The contributions reflect a broad scope of inquiry and diverse levels of analysis With an underlying evolutionary theme each of the contributors invoke their separate areas of expertise offering empirical and theoretical insights to this complex subject The multi faceted aspect of the book is meant to engender new perspectives that will synthesize current knowledge and lead to a more nuanced understanding of an ever timely issue in human behavior Of additional interest is a foreword written by world renowned psychologist Steven Pinker and an afterword by noted evolutionary scholar Richard Dawkins Human Evolution and Male Aggression Anne Innis Dagg, Lee Harding, 2012 Popular and scientific literature is still permeated with male aggression as a product of long evolution The fact that violent aggression appears in the archeological records less than half as long ago as artistic expression should give pause to any student of human behavior Humans are nothing like apes chimpanzees bonobos gorillas or orangutans which developed their mating systems independently from humans and from each other Chimpanzees have a promiscuous mating system bonobos are completely hedonistic gorillas have a harem system and orangutans are essentially solitary In those species males may compete with each other so aggression can occur Gibbons would be a better model for human behavior because they live in nuclear families several ages of dependant offspring living with adults for many years and are never aggressive toward each other Nuclear families are intimately tied to peaceful living because once established there is no need for aggression except for defence of territory against outsiders Although male aggression is a sad fact of modern society factors other than genetic heritage should be examined to explain this This book reviews the recent advances in the knowledge of human evolution that have greatly changed our conceptions It has been uncovered that humans are nothing like chimpanzees and far less like baboons Early humans never knuckle walked left the jungle for the savannah where they roamed widely in dispersed populations and for more than four million years lived in small groups or relatively peaceable societies with fathers raising children and joining with other adult males for community projects Human Evolution and Male Aggression dispels misconceptions based on flawed interpretations of biology and behavior It tells the compelling story of the human male s peaceful past It summarizes recent advances in understanding of bones brains hormones and genetics that reveals humans for who they are In reviewing the behavior of other primate males and their relationship to females and infants it sets the stage for a new paradigm of male behaviour one in which aggression though possible is suppressed most of the time in favor of affiliative behaviors that benefit females infants and society as a whole Encompassing topics relevant to biological and social sciences this book will be of interest to students of primatology evolutionary biology anthropology and human behaviour Evolution's Empress Maryanne L. Fisher, Justin R.

Sociobiology Edward O. Wilson, 2000-03-24 When this work was first published it started a tumultuous round in the age old nature versus nurture debate It shows how research in human genetics and neuroscience has strengthened the case for biological understanding of human nature

Neurobiology of Aggression Mark P Mattson, 2003-03-24 Aggression is a highly conserved behavioral adaptation that evolved to help organisms compete for limited resources and thereby ensure their survival However in modern societies where resources such as food shelter etc are not limiting aggression has become a major cultural problem worldwide presumably because of its deep seeded roots in the neuronal circuits and neurochemical pathways of the human brain In *Neurobiology of Aggression Understanding and Preventing Violence* leading experts in the fields of the neurobiology neurochemistry genetics and behavioral and cultural aspects of aggression and violence provide a comprehensive collection of review articles on one of the most important cross disciplinary issues of our time Rather than summarize the topics covered by each author in each chapter I present a schematic diagram to guide the reader in thinking about different aspects of aggressive and violent behavior from its neurobiological roots to environmental factors that can either promote or prevent aggression to visions of some of the most horrific acts of violence of our times and then towards the development of strategies to reduce aggressive behavior and prevent violence It is hoped that *Neurobiology of Aggression Understanding and Preventing Violence* will foster further research aimed at understanding the environmental genetic and neurochemical roots of aggression and how such information can be used to move forward towards the goal of eliminating violence

Evolutionary Theory and Processes: Modern Perspectives Solomon P. Wasser, 2012-12-06 This volume consists of papers written by evolutionary molecular and organismal biologists geneticists ecologists behavioural ecologists morphologists mathematicians theoreticians and experimentalists in honour of Professor Eviatar Eibl Nevo on the occasion of his seventieth birthday The contributors are only a small subset of Eibl's many friends collaborators and students not that one can distinguish these categories among Eibl's colleagues His widespread influence and activity both in Israel and more generally as a leading evolutionary biologist is indicated by his many co authors on books and papers and by his many students integrated in teaching and research This volume presents some of the most recent dramatic results of molecular genomic and organismal evolutionary processes It represents analyses experiments observations reviews

discussions and forecasts of evolutionary theory comprising both novel methods and results reanalyzed and reviewed data sets based on comparative experimental and theoretical studies utilizing model organisms across phylogeny including bacteria fungi plants animals and humans It elucidates the revolution in molecular biology that ushered in our understanding of the evolutionary process over time and space The topics discussed include major problems of evolutionary theory concerning origins phylogeny relative importance of evolutionary forces structure and function adaptation and speciation in space and time in changing and stressful environments A major emerging generalization is the nonrandomness of genome structure highlighting the importance of natural selection as a major organizing evolutionary force not only at the phenotypic level but most importantly at the interlinked genotypic molecular level The integration between the molecular and organismal levels unifies life which is subjected to the mechanism of natural selection as a major orienting evolutionary force
