Agricultural Biodiversity And Biotechnology In Economic Development:

Agricultural Biodiversity and Biotechnology in Economic Development Joseph Cooper, Leslie Lipper, David Zilberman, 2006-05-27 The topics addressed in this book are of vital importance to the survival of humankind. Agricultural biodiversity encompassing genetic diversity as well as human knowledge is the base upon which agricultural production has been built and protecting this resource is critical to ensuring the capacity of current and future generations to adapt to unforeseen challenges. Agricultural biodiversity underpins the productivity of all agricultural systems and is particularly important for poor and food insecure farmers who maintain highly diverse production systems in response to the marginal and risky production conditions they operate under. Understanding the importance of agricultural biodiversity in the livelihoods of the food insecure and enhancing its performance through the use of a variety of tools including biotechnology is a critically important issue in the world today where over 800 million people have insufficient food to meet minimum needs. A strong theme that runs throughout the book is the importance of good public policy interventions to promote the provision of public goods associated with agricultural biodiversity conservation and directing biotechnology development to meet the needs of the poor. The book's primary innovation is that it describes the relationship between biotechnology and plant genetic diversity and puts these in the context of agricultural development. Both the conservation of plant genetic diversity and agricultural biotechnology have received extensive examination but the linkages between the two have not despite the apparently obvious relationship between the two.

Agricultural Biodiversity and Biotechnology in Economic Development Joseph Cooper, Leslie Lipper, David Zilberman, 2008-11-01 This volume summarizes the current state of knowledge in the economic literature of management of agricultural biotechnology and biodiversity in agricultural and economic development. It identifies key issues confronting policy makers in managing biodiversity and biotechnology and provides a broad multi disciplinary analysis of the linkage between the two. It is especially innovative in its use of plant genetic resource management as the basis for its analysis.

Agrobiodiversity Conservation and Economic Development Andreas Kontoleon, Unai Pascual, Melinda Smale, 2008-10-03 This book reflects current developments in the economics of agrobiodiversity and focuses its attention on the role agrobiodiversity can have for economic development. As a new and rapidly expanding subfield at the interface of environmental ecological agricultural and development economics the editors and contributors to this volume provide a thorough structured and authoritative coverage of this field. Topics covered include the economic modelling of agrobiodiversity policy and governance solutions for the conservation of biodiversity in agricultural landscapes, contracts, markets and valuation. The authors include well known and respected academics and researchers who have a real policy perspective into the role of agrobiodiversity and economic development. The book provides coherent and up to date coverage of the economics of in situ agrobiodiversity conservation which is to a large extent currently absent. Though the material in the volume is primarily written for economists its content and style are highly

relevant and accessible to ecologists and conservation biologists and to academics from other broad disciplines that are located within the areas of economics and ecology

The Economics of Managing Crop Diversity On-farm Edilegnaw Wale, 2012-06-25 The purpose of this book is to assess a variety of economic issues as they relate to agro biodiversity and show how addressing these issues can assist in agro biodiversity policy making This is illustrated using empirical data from some of the countries Ethiopia Nepal and Zambia which are part of the Genetic Resources Policy Initiative The empirical chapters apply the relevant economic methods including regression analysis choice experiments hedonic pricing contingent valuation and farm business income analysis The authors discuss the economics of managing crop diversity on farm in the context of crop variety attribute preferences farmers perception of agro biodiversity loss and value addition and marketing of the products of traditional crop varieties The case studies include detailed analysis of traditional varieties of groundnut maize rice sorghum and teff The results are relevant not only to GRPI countries but also to other countries concerned with the sustainable utilization of these resources Overall the studies illustrate how genetic resources issues can be integrated into rural development interventions

Sustaining Biodiversity and Ecosystem Functions Clement A. Tisdell, 2015-10-30 The stock of the world's biological diversity and the state of its ecosystems are major determinants of the availability of commodities both essential and desirable for human life This leading edge study provides an overarching and balanced approach to the economics of biological conservation considering man made and natural components and their interdependence Recognising the deficiencies of many contemporary studies which focus almost entirely on natural capital Clement Tisdell utilizes the concept of heritage biological capital including germplasm as part of his analysis of changes in the stock of biological capital This comprehensive synthesis casts doubt upon some propositions and policies for resource conservation recommended by eminent ecologists in areas such as GM crops and livestock husbandry as well as agroecosystems and the concept of sustainable agricultural intensification The propositions presented are lent strength by the author's decision to relate his analysis to pertinent contemporary institutional developments and

scientific advances The broad scope and rational scepticism with which this book has been compiled make it an ideal read for economists interested in ecological and environmental economics natural scientists with an interest in biodiversity conservation and higher level policy makers in ecological and environmental fields

An Ecosystem Approach to Sustainable Agriculture Carl F. Jordan,2013-05-17 Modern industrial agriculture is not sustainable because of its heavy reliance on petroleum a non renewable source of the energy used in farming and because of pollution caused by petroleum products such as fertilizers and pesticides A systems analysis of farming suggests that agriculture will be more sustainable when services of nature such as nutrient recycling by soil micro organisms and natural controls of insects replace the services now provided by energy from petroleum Examples are drawn from the Southeastern USA but lessons learned can be applied worldwide
