Motha, 2005-12-06 One of the major challenges facing humankind is to provide an equitable standard of living for this and future generations adequate food water and energy safe shelter and a healthy environment Human induced climate change and increasing climate variability as well as other global environmental issues such as land degradation and loss of biological diversity threaten our ability to meet these basic human needs It is undisputed that the last two decades have been the warmest this century and likely to be the warmest for the last 1000 years sea level is rising rain and snowfall patterns are changing Arctic sea ice is thinning and the frequency and intensity of El Ni o events appear to be increasing In addition the frequency of extreme events is rising and many parts of the world have recently suffered major heat waves floods and droughts leading to significant loss of life and economic costs This requires the global community to give urgent attention to addressing key issues The range of adaptation options for agriculture and forestry is generally increasing because of technological advances thus reducing the vulnerability of these systems to climate change However some regions of the world particularly developing countries have limited access to these technologies Agriculture and forestry are currently not optimally managed with respect to today's natural climate variability Decreasing the vulnerability of agriculture and forestry to increasing climatic variability will go a long way towards reducing the long term vulnerability to climate change This book represents a major step in assessing the science of climate variability and change and their likely impacts on agriculture and forestry with clear adaptation strategies required to reduce their vulnerability **Bulletin** ,2004

*Management Strategies in Agriculture and Forestry for Mitigation of Greenhouse Gas Emissions and Adaptation to Climate Variability and Climate Change* World Meteorological Organization, 2004 This report presents examples of the impacts of adaptation strategies required for reducing vulnerability of agriculture and forestry to climate variability and climate change It also presents information on the impacts of the conversion of forests into crop and rangelands and also examples of the impact of management strategies to mitigate greenhouse gas emissions from agroecosystems *Technical note* World Meteorological Organization, 1954 **Water S.A.** ,2003 *Early Agrometeorological Crop Yield Assessment* Food and Agriculture Organization of the United Nations, 1986-01-01 Diverse meteorologische en hydrologische meetgegevens en cijfers van gewasopbrengsten uit verschillende landen worden weergegeven en in relatie tot elkaar gebracht om tot richtlijnen voor opbrengstvoorspelling te komen in het bijzonder voor de ontwikkelingslanden The Indian Journal of Agricultural Sciences ,2004 *Lecture Notes for Training Agricultural Meteorological Personnel* Jon Wieringa, Jacob Lomas, 2001 **Rainfed Agriculture in India** Jillella Venkateswarlu, 2003
