Nutrient Deficiencies of Field Crops Prakash Kumar, Manoj Kumar Sharma, 2013-12-06

Nutrient imbalance in soils is an emerging threat to sustainable agriculture. Intensive cultivation, use of poor quality groundwater, depletion of soil organic matter and excessive use of fertilizers are major reasons for poor soil fertility worldwide. This necessitates correct diagnosis of plant nutrient deficiencies to avoid further use of pesticides in cases where pests or pathogens that are not in fact the cause of poor crop health. Richly illustrated with 600 colour photographs, this book is a visual field identification guide for symptoms of most common nutrient deficiencies in field crops, covering all their stages of occurrence. Detailed descriptions and suggested management practices are given with each entry.

Soil Ecology and Management Joann K. Whalen, Luis Sampedro, 2010

Describes the organisms inhabiting the soil, their functions and interactions, and the dimensions of human impact on the activity of soil organisms and soil ecological function, and discusses basic soil characteristics and biogeochemical cycling, key soil flora and fauna, community level dynamics, soil food webs, and the ecological and pedological functions of soil organisms. Sustainable Agriculture Reviews 14 Harry Ozier-Lafontaine, Magalie Lesueur-Jannoyer, 2014-09-03

Sustainable agriculture is a rapidly growing field aiming at producing food and energy in a sustainable way for humans and their children. Sustainable agriculture is a discipline that addresses current issues such as climate change, increasing food and fuel prices, poor nation starvation, rich nation obesity, water pollution, soil erosion, fertility loss, pest control, and biodiversity depletion. Novel environmentally friendly solutions are proposed based on integrated knowledge from sciences as diverse as agronomy, soil science, molecular biology, chemistry, toxicology, ecology, economy, and social sciences. Indeed,

sustainable agriculture decipher mechanisms of processes that occur from the molecular level to the farming system to the global level at time scales ranging from seconds to centuries For that scientists use the system approach that involves studying components and interactions of a whole system to address scientific economic and social issues In that respect sustainable agriculture is not a classical narrow science Instead of solving problems using the classical painkiller approach that treats only negative impacts sustainable agriculture treats problem sources Because most actual society issues are now intertwined global and fast developing sustainable agriculture will bring solutions to build a safer world *Physiology of Nutrition and Environmental Stresses on Crop Productivity* A.
