Field Artillery And Fire Power J.B.A Bailey, 2003-09-02 This definitive overview of the development and use of artillery makes the complex artillery systems of today understandable while at the same time showing how they have evolved and how they are likely to change in the future The author until recently chief of artillery for the British Army is considered one of the world's foremost experts on the subject Unlike other books that either describe the technical aspects of present day firepower or outline its history during specific wars this work provides both a detailed explanation of the modern artillery system and a history of its development over the past six hundred fifty years identifying its enduring principles and changing practices against an ever changing background of technology tactics and strategy When an earlier version of this book was published in 1989 it became known as the best single source on field artillery in the English language This new edition has been fully updated and substantially expanded to cover a wide range of

contemporary military debates and the role of firepower and is certain to be regarded as the ultimate work on the subject for years to come J B A Bailey assesses major developments over the past decade analyzing artillery operations in airborne urban littoral desert jungle mountain artic and nocturnal environments He examines direct fire counterfire the suppression of enemy air defenses and force protection methods He explains field artillery from its primitive beginnings to its dominance as an art in World War II and its potent utility in operations since 1945 and into the future The book will be of particular interest to military historians and those engaged in debating firepower s future Published in cooperation with the Association of the United States Army 15 photographs 8 line drawings Appendixes Notes Bibliography Index 7 x 10 inches [International Commercial Arbitration and the Arbitrator's Contract](#) Emilia Onyema,2010-04-05 This book examines the formation nature and effect of the arbitrators contract addressing topics such as the appointment challenge removal and duties and rights of arbitrators disputing parties and arbitration institutions The arguments made in the book are based on a semi autonomous theory of the juridical nature of international arbitration and a contractual theory of the legal nature of these relationships From these premises the book analyses the formation of the arbitrator s contract in both ad hoc and institutional references It also examines the institution s contract with the disputing parties and its effect on the arbitrator s contract under institutional references The book draws from national arbitration laws and institutional rules in various jurisdictions to give a global view of the issues examined in it The arbitrator s contract is analysed from a global perspective of arbitral law and practice with insights from various jurisdictions in Africa Asia Europe North and South America The primary focus of the book is an analysis of the formation of the arbitrator s contract and the terms of this contract and the institution s contract The primary question of the consequences if any of the breaches of the terms of these contracts and its impact on the exclusion or limitation of liability of arbitrators and institutions is also analysed with the conclusion that since these transactions are contractual and the terms can be categorised as in any normal contract then normal contractual remedies can be applied to the breaches of these terms International Commercial Arbitration and the Arbitrator s Contract will be of great value to arbitration practitioners and researchers in arbitration It will also be very useful to students of arbitration on the topics of arbitrators and arbitration institution **Design and Protocol for Monitoring Indoor Air Quality** Niren Laxmichand Nagda,Jerome P. Harper,1989 The book is derived from a symposium prompted by the growing concern for air quality in homes offices and schools and the need for better design of investigations about indoor air quality problems and solutions Numerous chemical and physical factors influence the indoor concentrations of contaminants The multiplicity of these factors makes the investigation design process complex So well conceived designs and protocols form a crucial starting point for successful measurement programs Design of a study relates to developing a general strategy or approach protocols refers to specific procedures to be followed in conducting a study This document aims to provide information on designs and protocols used in different types of indoor air quality monitoring studies and to supply learning opportunities through shared

experience *Integration of Process Knowledge into Design Support Systems* Hubert Kals,Fred van Houten,2013-04-17
Design is a fundamental creative human activity This certainly applies to the design of artefacts the realisation of which has to meet many constraints and ever raising criteria The world in which we live today is enormously influenced by the human race Over the last century these artefacts have dramatically changed the living conditions of humans The present wealth in very large parts of the world depends on it All the ideas for better and new artefacts brought forward by humans have gone through the minds of designers who have turned them into feasible concepts and subsequently transformed them into realistic product models The designers have been still are and will remain the leading change agents in the physical world Manufacturability of artefacts has always played a significant role in design In pre industrial manufacturing the blacksmith held the many design and realisation aspects of a product in one hand The synthesis of the design and manufacturing aspects took almost implicitly place in the head of the man All the knowledge and the skills were stored in one person Education and training took place along the line of many years of apprenticeship When the production volumes increased assembling to measure was no longer tolerated and production efficiency became essential design process planning production planning and fabrication became separated concerns The designers created their own world separated from the production world They argued that restrictions in the freedom of designing would badly influence their creativity in design

Margaretha Dean,2013-01-16 Can we imagine organisations to be like human bodies Modern medicine has advanced since the study of blood phlegm yellow bile and black bile was assumed to explain how the body functions Organisational science today is in a similar mediaeval position with fragmented theories of structure competitiveness and human resources and no overall theory of organising This book fills that gap by constructing a physiological theory of organising During the middle of the twentieth century the anthropologist Radcliffe Brown asserted that there should be a single branch of science for the study of human society He maintained that a natural science in the form of the study of the physiology of societies was not yet available to form a link between theory and applied science This research based book explores the feasibility of studying the physiology of organisations and determines whether this sort of knowledge can offer an improved perspective on

organisational functioning If we think about organisations in the same way that we think about human bodies then we will be able to treat them when they are ill and ensure that they work at maximum efficiency Technology and the Air Force: A Retrospective Assessment , **National Library of Medicine Current Catalog** National Library of Medicine (U.S.),1992

Selected Water Resources Abstracts ,1976-11 **Advanced Topics in Mass Transfer** Mohamed El-Amin,2011-02-21

This book introduces a number of selected advanced topics in mass transfer phenomenon and covers its theoretical numerical modeling and experimental aspects The 26 chapters of this book are divided into five parts The first is devoted to the study of some problems of mass transfer in microchannels turbulence waves and plasma while chapters regarding mass transfer with hydro magnetohydro and electro dynamics are collected in the second part The third part deals with mass transfer in food such as rice cheese fruits and vegetables and the fourth focuses on mass transfer in some large scale applications such as geomorphologic studies The last part introduces several issues of combined heat and mass transfer phenomena The book can be considered as a rich reference for researchers and engineers working in the field of mass transfer and its related topics *Consequences of Combinatorial Studies of Positive Electrodes for Li-ion Batteries* Eric

McCalla,2014-04-11 Li Co Mn Ni oxides have been of extreme interest as potential positive electrode materials for next generation Li ion batteries Though many promising materials have been discovered and studied extensively much debate remains in the literature about the structures of these materials There is no consensus as to whether the lithium rich layered materials are single phase or form a layered layered composite on the few nanometer length scales Much of this debate came about because no phase diagrams existed to describe these systems under the synthesis conditions used to make electrode materials Detailed in this thesis are the complete Li Co Mn O and Li Mn Ni O phase diagrams generated by way of the combinatorial synthesis of mg scale samples at over five hundred compositions characterized with X ray diffraction Selected bulk samples were used to confirm that the findings are relevant to synthesis conditions used commercially The results help resolve a number of points of confusion and contradiction in the literature Amongst other important findings the compositions and synthesis conditions giving rise to layered layered nano composites are presented and electrochemical results are used to show how better electrode materials can be achieved by making samples in the single phase layered regions

The Indoor Environment Handbook Philomena Bluyssen,2009-12-01 Winner of the Choice Outstanding Academic Titles of 2010 award Ensuring that buildings are healthy and comfortable for their occupants is a primary concern of all architects and building engineers This highly practical handbook will help make that process more efficient and effective It begins with a guide to how the human body and senses react to different indoor environmental conditions together with basic information on the parameters of the indoor environment and problems that can occur It then moves on to give a background to the development of the study and control of the indoor environment examining the main considerations including thermal lighting indoor air and sound related aspects for a healthy and comfortable indoor

environment and discussing the drivers for change in the field. The final section presents a new approach towards health and comfort in the indoor environment where meeting the wishes and demands of the occupants with a holistic strategy becomes the over riding priority. The book is filled with useful facts, figures and analysis and practical methods that designers who are keen to assess and improve the user experience of their buildings will find invaluable.
