Abstract. The efficient functioning of the air transport system depends on many external factors, such as weather, economic crises, and epidemiological threats. Air operations performed in 2020-2021 at FIR Warszawa were analyzed and compared to 2019. A significant decrease in take-offs and landings was shown. The stability of the transport offer is one of the pillars of the high demand for transport services. Therefore, the legal regulations introduced at that time have been analyzed. Then their impact on the demand and the supply in the aviation market has been assessed. The destructive influence of the activities undertaken in this period on aviation has been demonstrated. Inductive inference on FIR Warszawa data has been carried out. The conclusions have been drawn. Statistics of domestic and international take-offs and landings for regular and non-scheduled flights in Poland in 2019-2021 have been presented. Statistical methods were used to achieve the goal. The analysis of legal acts, regulations, and documents introduced for regulating air operations in the analyzed years, as well as deductive and inductive reasoning, let to indicate and question the legitimacy of the actions taken in this area at that time. The conclusions confirm the thesis by Willie Walsh, former president of the International Airlines Group (IAG), that uncoordinated transport restrictions implemented separately by European countries have created uncertainty in potential passengers and led to losses and deficiencies in bookings in the aviation industry.

Keywords: supply and demand in air transport, transport statistics, inductive reasoning

1. Introduction

Derivative demand [17] exists when the demand for one good trigger demand for another. This observation characterizes the demand for air transport. Passengers demanding transport services usually satisfy their needs on rest, business trips, or meetings with relatives [9].

Challenges and Opportunities for Transportation Services in the Post-COVID-19 Era Catenazzo, Giuseppe, 2022-05-06 During the pandemic transportation industries have heavily suffered from the overall lack of passengers A substantial share of employees have been laid off and others have turned to different industries As mass vaccinations begin worldwide movement restrictions will continue to evolve and disappear in the months to come and new opportunities and challenges for transportation industries must be considered in a post pandemic world Challenges and Opportunities for Transportation Services in the Post COVID 19 Era explores the challenges and the new directions to match travelers needs in a post COVID 19 world and illustrates several methodological applications in transportation to inspire scholars researchers and developers to further their efforts in boosting the design and use of sustainable mobility Covering a range of topics such as green resilience and sustainability it is ideal for transportation service managers government officials developers engineers decision makers analysts academicians researchers instructors and students

Airline Network Development in Europe and its Implications for Airport Planning Guillaume Burghouwt, 2016-03-23 The ongoing deregulation and liberalization of worldwide air transport markets confronts airport planners with an increasingly problematic context On the one hand the capital intensive large scale and complex airport investments need a detailed long medium term planning of airport infrastructure Such planning requires at least predictable traffic volumes and traffic composition within the planning horizon On the other hand airline route networks are increasingly dynamic structures that frequently show discontinuous changes As a consequence the much more volatile airport traffic restricts the value of detailed traffic forecasts Volatility of airport traffic and its composition requires flexibility of airport strategies and planning processes The book explores this dilemma through a detailed study of airline network development airport connectivity and airport planning in the deregulated EU air transport market The questions the book seeks to answer are how have airlines responded to the regime changes in EU aviation with respect to the configuration of their route networks what has been the impact of the

reconfiguration of airline network configurations for the connectivity of EU airports how can airport planners and airport authorities deal with the increasingly uncertain airline network behaviour in Europe

Annual Energy Outlook 1998: With Projections to 2020, 2001 The Annual Energy Outlook 1998 AEO98 is the first AEO with projections to 2020 Key issues for the forecast extension are trends in energy efficiency improvements the effects of increasing production and productivity improvements on energy prices and the reduction in nuclear generating capacity Projections in AEO98 also reflect a greater shift to electricity market restructuring Restructuring is addressed through several changes that are assumed to occur in the industry including a shorter capital recovery period for capacity expansion decisions and a revised financial structure that features a higher cost of capital as the result of higher competitive risk Both assumptions tend to favor less capital intensive generation technologies such as natural gas over coal or baseload renewable technologies The forecasts include specific restructuring plans in those regions that have announced plans California New York and New England are assumed to begin competitive pricing in 1998 The provisions of the California legislation for stranded cost recovery and price caps are incorporated In New York and New England stranded cost recovery is assumed to be phased out by 2008
