## **Air Sea Interaction:**

**Air-Sea Interaction** F. Dobson, L. Hasse, R. Davis, 2012-12-06 During the past decade man's centuries old interest in marine meteorology and oceanography has broadened Ocean and atmosphere are now treated as coupled parts of one system the resulting interest in air sea interaction problems has led to a rapid growth in the sophistication of instruments and measurement techniques This book has been designed as a reference text which describes along with the instruments themselves the accumulated practical experience of experts engaged in field observations of air sea interactions It is meant to supplement rather than replace manuals on standard routine observations or instrumentation handbooks At the inception a textbook was planned which would contain only well tested methods and instruments It was quickly discovered that for the book to be useful many devices and techniques would have to be included which are still evolving rapidly The reader is therefore cautioned to take nothing in these pages for granted Certainly every contributor is an expert but while some are backed up by generations of published work others are pioneers The choice of topics of course is debatable The types of observations included are not exhaustive and topics such as marine aerosols and radio tracers are omitted as was the general subject of remote sensing which was felt to be too broad and evolving too rapidly The guideline adopted in limiting size was maximum usefulness to a trained experimentalist new to the field *Air-Sea Interaction* G. T. Csanady, 2001-03-19 *Air Sea Interaction Laws and Mechanisms* provides a comprehensive account of how the atmosphere and the ocean interact to control the global climate what physical laws govern this interaction and what are its prominent mechanisms It is mainly directed towards graduate students and research scientists in meteorology oceanography and environmental engineering The book will be of value on entry level courses in meteorology and oceanography and also to the broader physics community interested in the treatment of transfer laws and thermodynamics of the atmosphere and ocean **Interaction Between the Atmosphere and the Oceans** Joint Panel on Air-Sea Interaction, 1962 **The Physics of Air-sea Interaction** S.A. Kitaigorodskii, 1970 **Air-sea Interaction** M. A. Donelan, *Interaction Between the Atmosphere and the Oceans* National Research Council (U.S.). Joint Panel on Air-Sea Interaction, 1962 **Air-Sea Interaction and Oceanic Extremes** Lichuan Wu, Jinbao Song, Victor Alari, Leonie Esters, 2024-12-24 Air sea interactions control the exchange of mass momentum and heat between the atmosphere and the ocean Substantially they significantly affect the development of atmospheric and oceanic systems from submesoscale to global scales Oceanic extremes i.e. cyclones storms freak waves polar lows storm surge etc pose a significant hazard to offshore activities and coastal society Air sea interaction processes are complex and play a central role in the development of those oceanic extremes Improved understanding of the air sea interaction processes and describing them in weather models and Earth System Models can improve their prediction and mitigate the potential damages The energy distribution affected by air sea interactions can change the large scale circulation and alter the climatology of the oceanic extremes Despite an overall improvement in the understanding of air sea interactions there are

still many knowledge gaps particularly under extreme conditions

*Ocean Circulation and Air-Sea Interaction in the South China Sea* Dongxiao Wang, 2022-10-28

This book summarizes achievements of the study on circulation and air sea interaction and development of the ocean observation network in the South China Sea in the last 20 years thus serving as a comprehensive reference book to understand the dynamic environment in the SCS It consists of seven chapters briefly reviewing our understanding of the SCS circulation and air sea interaction in chapter 1 then describing in detail the upper layer circulation from large scale SCS through flow SCS western boundary current etc to meso and submeso scale in Chapters 2 and 5 dilute river plume and coastal upwelling over the shelf in Chapter 3 deep ocean circulation in Chapter 4 tropical cyclone activities and air sea flux at the interface in Chapter 6 and the construction of the observation network and database in Chapter 7 Besides the basic features of these physical processes the book also discusses their variations and fundamental dynamics Thus it is written in a way that meets the different information demands from researchers working in various marine related fields

**Extreme Events of Air-Sea Interaction** Tarek M. El-Geziry, 2023-05

Air sea interaction is one of the earliest topics of investigation and examination by researchers in oceanography and meteorology The importance of the subject stems from the effect this interaction has on the world at global regional and local levels This book explores this process taking the basins of the Mediterranean and Red Seas as areas of particular interest The main conclusion drawn in this work is that the anthropogenic activities have had destructive effects on both oceans and the atmosphere leading once normal air sea interaction processes to shift towards being extreme events Such extreme events have severe impacts on oceans human health agriculture the global socioeconomic sector and various other areas of life This subject is of interest to professionals and postgraduate candidates and this book includes a set of references to which readers can refer to expand their knowledge about the topic

**Tropical and Extratropical Air-Sea Interactions** Swadhin Kumar Behera, 2020-11-18

Tropical and Extratropical Air Sea Interactions Modes of Climate Variations provides a thorough introduction to global atmospheric and oceanic processes as well as tropical subtropical and mid latitude ocean atmosphere interactions Written by leading experts in the field each chapter is dedicated to a specific topic of air sea interactions such as ENSO IOD Atlantic Nino ENSO Modoki and newly discovered coastal Ni os Ni as and their teleconnections As the first book to cover all topics of tropical and extra tropical air sea interactions and new modes of climate variations this book is an excellent resource for researchers and students of ocean atmospheric and climate sciences Presents case studies on the ocean atmosphere phenomena including El Nino Southern Oscillation ENSO Indian Ocean Dipole and different Nino Nina phenomena Provides a clear description of air sea relationships across the world s ocean with an analysis of air sea relations in different time scales and a focus on climate change Includes prospects for air sea interaction research thus benefiting

Geernaert, 2013-04-17 During the 1980 s a wealth of information was reported from field and laboratory experiments in order to validate and/or modify various aspects of the surface layer Monin Obukhov M O similarity theory for use over the sea and to introduce and test new concepts related to high resolution flux magnitudes and variabilities For example data from various field experiments conducted on the North Sea Lake Ontario and the Atlantic experiments among others yielded information on the dependence of the flux coefficients on wave state In all field projects the usual criteria for satisfying M O similarity were applied The assumptions of stationarity and homogeneity was assumed to be relevant over both small and large scales In addition the properties of the outer layer were assumed to be correlated with properties of the surface layer These assumptions generally required that data were averaged for spatial footprints representing scales greater than 25 km or typically 30 minutes or longer for typical windspeeds While more and more data became available over the years and the technology applied was more reliable robust and durable the flux coefficients and other turbulent parameters still exhibited significant unexplained scatter Since the scatter did not show sufficient reduction over the years to meet customer needs in spite of improved technology and heavy financial investments one could only conclude that perhaps the use of similarity theory contained too many simplifications when applied to environments which were more complicated than previously thought      **Air-Sea Interaction Project** Air-Sea Interaction Subcommittee, 1975
