Airborne Pollutants:

Human Exposure Assessment for Airborne Pollutants National Research Council, Division on Earth and Life Studies, Commission on Life Sciences, Committee on Advances in Assessing Human Exposure to Airborne Pollutants, 1991-02-01 Most people in the United States spend far more time indoors than outdoors Yet many air pollution regulations and risk assessments focus on outdoor air These often overlook contact with harmful contaminants that may be at their most dangerous concentrations indoors A new book from the National Research Council explores the need for strategies to address indoor and outdoor exposures and examines the methods and tools available for finding out where and when significant exposures occur The volume includes A conceptual framework and common terminology that investigators from different disciplines can use to make more accurate assessments of human exposure to airborne contaminants An update of important developments in assessing exposure to airborne contaminants ambient air sampling and physical chemical measurements biological markers questionnaires time activity diaries and modeling A series of examples of how exposure assessments have been applied properly and improperly to public health issues and how the committee's suggested framework can be brought into practice This volume will provide important insights to improve risk assessment risk management pollution control and regulatory programs

ENVIRONMENTAL PSYCHIATRY: Airborne pollutants and mental health Sharmilla Kanagasundram, 2024-08-19 This book is composed of two separate reviews The first review merges the extended evidence on the effects of air pollutants on mental health The second review is based on interventions to decrease air pollution Six common pollutants were identified The common airborne pollutants are particulate matter Pm nitrogen dioxide NO₂ sulphur dioxide SO₂ carbon monoxide CO ozone O₃ and volatile organic compounds VOCs Particulate matter has been identified as a common air pollutant that increases the risk of mental illness The most common air pollutant found to increase the risk of depression and anxiety was Pm 2.5 The exposure concentration levels of Pm 2.5 which were reported to increase the risk of depression ranged from 9.8 g m³ to 74.3 g m³ with a median of 26.6 g m³ and the exposure concentration levels reported to increase the risk of anxiety ranged from 11.1 g m³ to 24.8 g m³ with a median of 16.5 g m³ Air pollutants are not the sole factor responsible for mental illness however when taken together with other risk factors such as genetics lifestyle socioeconomic status and access to mental healthcare air pollutants can be regarded as a significant contributing factor to mental illness

Air Pollutants in the Context of One Health Sylvester Chibueze Izah, Matthew Chidozie Ogwu, Abbas Shahsavani, 2024-11-25 This book reviews air pollutants and their effects on human health biodiversity and environmental quality in the context of the One Health framework Written by experts in the field the book covers topics such as natural and anthropogenic sources of air pollutants air pollutants classification based on their chemical composition physical properties and origins and consequences of air pollution on ecosystems wildlife and human communities In this book readers will find a detailed examination of pollutants such as particulate matter volatile organic compounds and greenhouse

gases and will learn about the mechanisms by which pollutants impact for instance the respiratory cardiovascular and neurological systems The book highlights the need for understanding the different pollutants and their One Health effects as a foundation for developing effective regulations emission controls cleaner technologies and promoting lifestyle changes The book also offers a global perspective on air pollution and discusses the disproportionate impacts of air pollution on vulnerable populations In alignment with the United Nations Sustainable Development Goals SDG specifically SDG 3 Good Health and Well being SDG 7 Affordable and Clean Energy and SDG 11 Sustainable Cities and Communities this book takes a focused approach to the One Health implications of various air pollutants and is an important contribution to the global effort to mitigate the impact of air pollution on human health biodiversity security and environmental quality Together with its companion work Sustainable Strategies for Air Pollution Mitigation this book is a valuable resource for students researchers policymakers and anyone seeking a comprehensive perspective on this critical environmental and public health challenge
