Aircraft Technology:

Aircraft Technology Melih Kushan, 2018-09-12 It is well known that improvements in space and aviation are the leader of today's technology and the aircraft is the most important product of aviation. Because of this fact, the books on aircraft are always at the center of interest. In most cases, technologies designed for the aerospace industry are rapidly extending into other areas. For example, although composite materials are developed for the aerospace industry, these materials are not often used in aircraft. However, composite materials are utilized significantly in many different sectors such as automotive, marine, and civil engineering. And materials science in aviation, reliability, and efficiency in aircraft technology have a major importance in aircraft design.

Recent Advances in Aircraft Technology Ramesh K. Agarwal, 2012-02-24 The book describes the state of the art and latest advancements in technologies for various areas of aircraft systems. In particular, it covers a wide variety of topics in aircraft structures and advanced materials, control systems, electrical systems, inspection and maintenance, avionics, and radar, and some miscellaneous topics such as green aviation. The authors are leading experts in their fields. Both the researchers and the students should find the material useful in their work.

Hydrogen Aircraft Technology G. Daniel Brewer, 2017-11-22 Liquid hydrogen is shown to be the ideal fuel for civil transport aircraft as well as for many types of military aircraft. *Hydrogen Aircraft Technology* discusses the potential of hydrogen for subsonic, supersonic, and hypersonic applications. Designs with sample configurations of aircraft for all three speed categories are presented in addition to performance comparisons to equivalent designs for aircraft using conventional kerosene-type fuel and configurations for aircraft using liquid methane fuel. Other topics discussed include conceptual designs of the principal elements of fuel containment systems required for cryogenic fuels, operational elements, e.g., pumps, valves, pressure regulators, heat exchangers, lines, and fittings, modifications for turbine engines to maximize the benefit of hydrogen, safety aspects compared to kerosene and methane-fueled designs, equipment and facility designs for servicing hydrogen-fueled aircraft, production methods for liquid hydrogen, and the environmental advantages for using liquid hydrogen. The book also presents a plan for conducting the necessary development of technology and introducing hydrogen fuel into the worldwide civil air transport industry. *Hydrogen Aircraft Technology* will provide fascinating reading for anyone interested in aircraft and hydrogen fuel designs.

Electric Flight Technology Ravi Rajamani, 2018-05-28 The environmental impact of hydrocarbon burning aircraft is one of the main motivations for the move to electric propulsion in aerospace Also cars buses and trucks are incorporating electric or hybrid electric propulsion systems reducing the pressure on hydrocarbons and lowering the costs of electrical components The economies of scale necessitated by the automotive industry will help contain costs in the aviation sector as well The use of electric propulsion in airplanes is not a new phenomenon However it is only recently that it has taken off in a concrete manner with a viable commercial future The *Electric Flight Technology Unfolding of a New Future* reviews the history of this field discusses the key underlying technologies and describes how the future for these technologies will likely unfold distinguishing between all electric AE and hybrid electric HE architectures Written by Dr Ravi Rajamani it covers the essential information needed to understand this new technology wave taking hold in the aerospace industry The *Electric Flight Technology Unfolding of a New Future* covers fundamental topics such as The history of electric propulsion including its evolution from using traditional electricity to solar power to batteries as sources to sustain propulsion and flight The various architectures being considered for electric aircraft specifically small general aviation GA aircraft and larger business jets single aisle commercial aircraft and larger twin aisle commercial aircraft The various systems and subsystems of an electric aircraft along with how various subsystems in the vehicle can be integrated in a more optimal manner In the future the existing tube and wing configuration will not be the only available architecture instead we will be more likely to find an architecture where the propulsion system is embedded within the airframe The future trends in this arena and what we can expect to see in the next decade or so
