*Philosophy, Learning and the Mathematics Curriculum* Xuehui Xie, Phil Francis Carspecken, 2019-02-18 Mathematics curriculums used in progressive classrooms of the United States and in classrooms of the People's Republic of China presuppose markedly different philosophies Xie and Carspecken reconstruct different assumptions operating implicitly within mathematics curriculums developed by the Ministry of Education in China and NCTM in the United States Each curriculum is constructed upon a deep structure holistically integrating presuppositions about the nature of the human self society learning processes language concepts human development freedom authority and the epistemology and ontology of mathematical knowledge Xie and Carspecken next present an extended discussion of the two main philosophical traditions informing these curriculums dialectical materialism in the case of the Chinese mathematics curriculum and Dewey's instrumental pragmatism in the case of NCTM Both philosophies were developed as movements out of Hegelian idealism while retaining the anti dualist and anti empiricist insights of Hegel's thought The history of dialectical materialism and Dewey's instrumentalism is carefully examined by the authors to identify both similarities and sharp differences in the resulting mature philosophies Drawing upon more recent philosophies of intersubjectivity Brandom Habermas and dialectical materialist psychologies Vygotsky Luria the authors conclude this book with arguments for overcoming the limitations of a purely instrumentalist framework and for expanding potentialities implicit within dialectical philosophies This book will be of value to a broad audience including mathematics educators philosophers curriculum theorists social theorists and those who work in comparative education and learning science *Understanding Fractions* Loretta Taylor, Pearson Education, Harold D. **Genomics and computational science for virus research** Hironori Sato,Masaru Yokoyama,Hiroyuki Toh, A biologically striking and clinically important feature of viruses is their rapid evolutionary dynamics in nature The continual interactions between viruses and host organisms promote quick changes in virus populations eventually leading to co evolution of viruses and hosts for their survival The structural and functional information on the interactions between viruses and hosts should provide a molecular and biological basis to understand infection replication cell host tropism immune escape pathogenesis and direction of evolution of viruses The information is also essential to develop methods to control transmission and replication of pathogenic viruses However the integrated information on the structure function and evolution of viruses and hosts has remained poorly accumulated partly due to the limitation of analytical methods Recent progress in genome science and computational approach may open up a new avenue of research of the interactions between viruses and hosts by integrating information on the structures functions and evolution In this Research Topic we welcome papers concerning the computer assisted structural and functional studies based on genomic information with theoretical or in combination with experimental approaches for understanding molecules infection replication cell host tropism immune escape pathogenesis and evolution of viruses in nature
