Neuro-Fuzzy Architectures and Hybrid Learning Danuta Rutkowska,2012-11-13 The advent of the computer age has set in motion a profound shift in our perception of science its structure its aims and its evolution Traditionally the principal domains of science were and are considered to be mathematics physics chemistry biology astronomy and related disciplines But today and to an increasing extent scientific progress is being driven by a quest for machine intelligence for systems which possess a high MIQ Machine IQ and can perform a wide variety of physical and mental tasks with minimal human intervention The role model for intelligent systems is the human mind The influence of the human mind as a role model is

clearly visible in the methodologies which have emerged mainly during the past two decades for the conception design and utilization of intelligent systems At the center of these methodologies are fuzzy logic FL neurocomputing NC evolutionary computing EC probabilistic computing PC chaotic computing CC and machine learning ML Collectively these methodologies constitute what is called soft computing SC In this perspective soft computing is basically a coalition of methodologies which collectively provide a body of concepts and techniques for automation of reasoning and decision making in an environment of imprecision uncertainty and partial truth
