Basic Science In Toxicology:

Applied Toxicology: Approaches Through Basic Science Jürg P. Seiler, Eugenio Vilanova, 2012-12-06 Ultraviolet radiation a component of sunlight has been recognized by photobiologists dermatologists and oculists as a potential hazard for human health because of its genotoxic carcinogenic and immunotoxic properties Its effects on human health include the induction of skin cancers ocular damage and impairment of immunity to certain infections A few decennia ago it was demonstrated that UV photons can affect the activity of the immune system through interactions with the skin This means that UV not only changes normal cells into cancer cells but also permits the outgrowth of the UV transformed cells by depressing the immune system An intriguing question is what interactions between UV radiation and the skin initiates alterations in immune function in the exposed skin and systemically i e in other places than the exposed skin During the last 20 years many studies have been performed in order to investigate the immunosuppressive activities of UVB in laboratory animals and in human volunteers In particular effects of UVB radiation on resistance to tumours and skin associated infections have been examined In addition effects of UVB radiation on immune parameters such as contact hypersensitivity and delayed type hypersensitivity both type IV hypersensitivity reactions mixed lymphocyte reactions mixed skin lymphocyte reactions antigen presentation and numbers and function of Langerhans cells have been studied intensively The antigenicity of murine tumours which are caused by UVB radiation was one of the first items to be investigated Kripke 1974 *Toxicology* Louis J. Toxic Sexual Politics Melina Packer, 2025-01-28 A bold exposé of how the very foundation of toxicology has been contaminated by sexist and racist ideologies. The first critical understanding of the field of toxicology from a feminist and antiracist perspective. Toxic Sexual Politics asserts that the science of toxicants must be held accountable for the uneven distribution of toxic pollution along racial and sexual lines. Drawing upon in-depth interviews and extensive ethnographic and archival research including participant observations in toxicology classrooms, conferences, and laboratories, Melina Packer urges environmental health advocates to place toxicant science within its masculinist, militarist, and eugenicist history. Toxic Sexual Politics shows how the founding fathers of U.S. toxicology were ideologically aligned with the chemical industry, inventing a science that could make chemicals safe as opposed to one that could adequately protect planetary health from toxicants' hazards. While many toxicologists today are critical of the chemical industry, they continue to rely on the highly limited tools of toxicology as accurate measures of toxicity as do government regulators, the courts, and environmental advocates. Unlike most critiques of the chemical industry and narratives of environmental health movements, Toxic Sexual Politics refuses to take the science at face value. By focusing on the sexist, racist, and ableist biases reinforced by toxicology, Packer powerfully argues that this scientific discipline reproduces the very same white supremacist and heterosexist logics that generated environmental injustices in the first place. The field of toxicology can explicitly confront chemical corporate power by building from queer feminist, anti-ableist, and antiracist movements for environmental and reproductive justice.
