Technology has immense potential to advance medical and health education and medical practice and to greatly improve the experiences of learners and service receivers. However, many medical and health educators currently do not have the requisite skills, exposure, and capacity to use the advanced and relatively sophisticated technologies currently available to add value to student and trainee experiences. This book addresses this current skills gap, providing a comprehensive yet readable introduction to and summary of this rapidly developing field, helping medical and health educators to make the most of the technology available to enhance and improve the student learning experience while adhering to principles that are in alignment with accepted medical education practices, where standardization remains a key consideration.

Key Features:

- Fills gaps in previous training to equip medical and health educators with requisite knowledge, skills, and attitude to embrace technological advancements.
- Considers tech integration into each major division of health and medical education.
- Provides strategies for leading innovation in health and medical education.
- Addresses educational management and leadership aspects with an emphasis on standardization and optimization in educational technologies.

This new book provides a much-needed standard text on the effective use of technology for all educators involved in teaching medical students and other health professions globally.

Introduction to Exercise Physiology Tommy Boone, 2014

Introduction to Exercise Physiology identifies the key scientific content that is critically important to the successful practice of exercise physiology. This text introduces students to the scientific basis for the practice of exercise physiology to prevent or control mind-body diseases, to promote health and well-being, and to enhance athlete performance. The goal of this text is to embrace a new paradigm of exercise physiology as a comprehensive healthcare profession.

Specific physiologic calculations are presented to teach students how to monitor exercise intensity as well as to improve the safety and credibility of client-specific test protocols, health, and fitness training programs and athletic competitions.

Introduction to Exercise Physiology teaches students the necessary physiologic, electrocardiographic, biomechanic, and anatomic concepts to prepare for and pass the ASEP Board Certification exam.

This aspect is especially relevant to promoting physical activity and its relationship with healthy habits such as the consumption of unprocessed foods, the reduction of a sedentary lifestyle and the improvement of adherence to sports. In this sense, the World Health Organization warns that the current rates of overweight and obesity are very high and that we must combat them. From formal education, you can help improve healthy habits with educational programs and especially in Physical Education, a subject where the work of physical, social and cognitive well-being has special relevance. Since the 20th century, studies and research that have aimed to combat unhealthy habits in educational centres and sports schools have increased. Not only by promoting physical activity within the school but above all by seeking to generate adherence towards the future of students and athletes.

Challenges and Solutions of Oncological Hyperthermia

Andras Szasz, 2020-04-02 The next generation of oncological hyperthermia involves the medical innovation of selectively heating up the malignant cells of the body in a controlled way. The easily distinguishable biophysical and physiological characteristics of cancer cells and their immediate environment are the focus of the targeted energy delivery of this treatment. This heterogenic heating concept breaks with the homogeneous nature of conventional hyperthermia where an isothermally equal temperature is applied to the large surface area of a solid tumor. Due to its selectivity, the new concept enables the usage of a significantly lower energy, making it safer, less toxic and easier to use. This book shows the challenges facing oncological hyperthermia and highlights clinical results obtained in various countries. It also presents discussions about the theoretical basis of the method, adding some technical discussions and clarifying the most difficult points of its design. The contributions dealing with clinical results use state-of-the-art conventional therapies with complementary hyperthermia and show the advantages of such a combination.
