David Bonnell, 2012-12-06  
While there are many quality assurance books on the market very few address the application of the concept to the seafood industry In addition many of the books that are available take a theoretical approach and therefore do not provide actual examples of the fins and bones of quality programs The author in teaching quality assurance over nine years has not been able to find a textbook that is suitable as a reference text in quality assurance courses for the seafood industry It is this

situation that has prompted the preparation of this book which takes a practical approach to the subject of quality assurance in seafood processing operations This book can serve as either a textbook or as a reference text As a textbook it is written for students of quality assurance at the technician technologist and university levels In this role it is intended that the student will start at the beginning of the book and proceed through in sequence so as to gain a complete understanding of the design implementation and operation of a quality program in seafood processing operations It is the hope of the author that the book also functions quite well as a desk reference for the managers of seafood processing operations who need to refer occasionally to particular items or chapters In this sense each chapter is designed to stand alone as a discussion of a particular concept within the quality assurance discipline
