Conserving Stone Heritage Francesca Gherardi, Pagona Noni Maravelaki, 2022-01-12 The design of treatments for the conservation of stone in historical buildings and works of art is a challenging task as a deep understanding of the working properties and performance of the available products and methods is required to tackle complex decay patterns The chapters in this book illustrate the state of the art on traditional and innovative materials and methods for stone conservation examining current trends and future perspectives Each of them is focused on describing the consequent phases that complement the spectrum of the conservation intervention preliminary investigations condition assessment and mapping of the deterioration patterns surface cleaning with a specific focus on laser technology consolidation protection repair mortars and grouts and onsite assessment and monitoring of conservation treatments The performance of the applied conservation interventions is criticized and discussed with an aim of providing the specialists with specific tools for stone conservation This book intends to bridge the gap between laboratory studies and conservation interventions by linking together the diverse scientific areas involved in the preservation of stone heritage Different case studies are included highlighting specific conservation challenges and their solutions in order to understand and overcome them The aim is to guide conservators conservation scientists and heritage stakeholders in the selection of compatible and sustainable materials and techniques for Conserving Stone Heritage

PROCEEDINGS 4th International Congress on “Science and Technology for the Safeguard of Cultural Heritage in the Mediterranean Basin” VOL. II , *Planning and Engineering Guidelines for the Seismic Retrofitting of Historic Adobe Structures* E. Leroy Tolles, Edna E. Kimbro, William S. Ginell, 2003-03-20 Adobe or mud brick has been widely used as a building material in the American Southwest including California The vulnerability of many original adobe structures to damage or destruction from earthquakes has been of great concern The guidelines presented here address the practical aspects of this problem and represent the culmination of 12 years of research and testing on the seismic retrofitting of adobe buildings These guidelines can assist in the planning of seismic retrofitting projects consistent with both conservation principles and established public policy

Traditional Construction for a Sustainable Future Carole Ryan, 2011-01-13 Since the spread of classical design and construction amongst the upper echelons of British society in the late seventeenth century traditional construction methods have largely fallen by the wayside Centuries later as the construction industry faces up to its environmental responsibilities this book explores its rich and ancient tradition to provide tried and trusted solutions to modern day construction problems By way of introduction the ancient and historical lifestyles that dictated the nature of traditional construction are explored before focussing on its health and ecological benefits As well as cultural background this book includes a detailed scientific description of traditional building materials and their constituents which draws a sharp contrast with modern petrochemical based materials The studies of traditional buildings included reveal the sustainability of features such as natural ventilation and breathing walls

and comparisons with modern construction methods show how they could prevent sick building syndrome The author argues that maintenance for long life by contrast with the modern concept of life cycle costing is at the nub of sustainability and underlies the contribution traditional building construction can make to tackling climate change Over 250 original photos and over fifty bespoke diagrams illustrate the features techniques and characteristics of traditional construction that could make such a valuable contribution to the industry today The inclusion of a close study of how these methods relate to British building regulations makes this book a practical guide for construction professionals as well as an authoritative resource for students and policy makers

Laser Processing: Surface Treatment and Film Deposition J. Mazumder, O. Conde, R. Vilar, W. Steen, 2012-12-06 Synthesis of nonequilibrium metallic phases has been an area of great interest to the materials processing community since early 1960 Inherent rapid cooling rates in laser processing are being used to engineer non equilibrium microstructures which cannot be rivaled by other processes This lecture will discuss the phenomena involved and its application in designing materials with tailored properties What is non equilibrium Synthesis This is a synthesis method to produce binary or higher order materials where kinetics of the process affects the transport of the constituent elements during phase transformation resulting in a composition or crystallographic configuration which is different from what is observed when the elements arrange themselves with the lowest possible Gibbs Free energy which is the equilibrium condition Figure 1 illustrates the phenomena

Phase diagram under equilibrium condition is illustrated by the solid line whereas the no equilibrium phase diagram is represented by the dotted line One can observe the shrinkage of the phase field under non equilibrium condition Any alloy composition between the solidus lines of the equilibrium and non equilibrium phase diagram will be a non equilibrium alloys with extended solid solution
