A steady current I in a long wire produces a magnetic field $\mathbf{B}$ that is tangent to any circle that lies in the plane perpendicular to the wire and whose center is the axis of the wire. It can be shown that the magnitude $B = \|\mathbf{B}\|$ of the magnetic field at a distance r from the center of the wire is

$$B = \frac{\mu_0 I}{2\pi r},$$

where μ_0 is the permeability of free space. That is, for a wire along the z -axis with a steady current I , we have

$$\mathbf{B}(x, y) = \frac{\mu_0 I}{2\pi(x^2 + y^2)} (-y\mathbf{i} + x\mathbf{j}).$$

- (i) Consider the curve $S = \{\cos(t)\mathbf{i} + \sin(t)\mathbf{j} : 0 \leq t < 2\pi\}$ in the $z = 0$ plane. What is the work done over this curve by the magnetic field? Is $\mathbf{B}$ conservative in the region contained by the curve?
- (ii) Consider the curve S that goes around the square with vertices $(1,1)$, $(2,1)$, $(2,2)$ and $(1,2)$ (counterclockwise direction) in the $z = 0$ plane. What is the work done over this curve by the magnetic field? Is $\mathbf{B}$ conservative in the region contained by the curve?

World Deanna de Zilwa, 2010-09-17 As clocks struck midnight on the 31st December 2009 announcing the dawn of a new decade amidst the jubilation of a new beginning we paused momentarily to reflect on the decade that had just past. It was a difficult era for many people and organisations. Many were affected by war, terrorism, famine, and tsunamis. First world citizens enjoyed opportunities to relax in a technologically driven environment. People on streets, trains, and planes from London to New York sported the white ear buds of iPhones as de rigueur adornments. The pace and intensity of our lives now seems to run at warp speed; we rush from appointment to appointment swigging vitamin-enhanced mineral water, obsessing about fluctuations in our body mass index and the Dow Jones index in equal measure. Yet as individuals we can choose to accept or reject some of these changes. Those with sufficient material resources can cocoon themselves in high security fortress homes or relocate to safer, more tranquil environs or even redesign themselves with the aid of Botox and a skilled plastic surgeon. Yet some organisations do not have the luxury of volition; they cannot choose whether to accept or reject the affects of environmental changes. A type of organisation that has found itself situated in environments that are increasingly complex and turbulent are academic units, departments, schools, and faculties in many publicly funded universities around the globe.
