**Conservation and Management of Tropical Rainforests, 2nd Edition** Eberhard F Bruenig, 2016-12-07 This new edition of Conservation and Management of Tropical Rainforests applies the large body of knowledge experience and tradition available to those who study tropical rainforests Revised and updated in light of developments in science technology economics politics etc and their effects on tropical forests it describes the principles of integrated conservation and management that lead to sustainability identifying the unifying phenomena that regulate the processes within the rainforest and that are fundamental to the ecosystem viability Features of the natural forest and the socio cultural ecosystems which can be mimicked in the design of self sustaining forests are also discussed A holistic approach to the management and conservation of rainforests is developed throughout the book The focus on South East Asian forestry will be widened to include Africa and Latin America Recent controversial issues such as biofuels and carbon credits with respect to tropical forests and their inhabitants will be discussed This book is a substantial contribution to the literature it is a valuable resource for all those concerned with rainforests

**Conserving Tropical Forests and Biological Diversity**, 1989 Tropical Rain Forest Ecology, Diversity, and Conservation Jaboury Ghazoul, Douglas Sheil, 2024-03-14 Rain forests represent the world's richest repository of terrestrial biodiversity and play a major role in regulating the global climate They support the livelihoods of a substantial proportion of the world's population and are the source of many internationally traded commodities They remain despite decades of conservation attention increasingly vulnerable to degradation and clearance with profound though often uncertain future costs to global society Understanding the ecology of these diverse biomes and peoples dependencies on them is fundamental to their future management and conservation Tropical Rain Forest Ecology Diversity and Conservation introduces and explores what rain forests are how they arose what they contain how they function and how humans use and impact them The book starts by introducing the variety of rain forest plants fungi microorganisms and animals emphasising the spectacular diversity that is the motivation for their conservation The central chapters describe the origins of rain forest communities the variety of rain forest formations and their ecology and dynamics The challenge of explaining the species richness of rain forest communities lies at the heart of ecological theory and forms a common theme throughout The book's final section considers historical and current interactions of humans and rain forests It explores biodiversity conservation as well as livelihood security for the many communities that are dependent on rain forests inextricable issues that represent urgent priorities for scientists conservationists and policy makers

Timber Production and Biodiversity Conservation in Tropical Rain Forests Andrew Grieser Johns, 1997-07-10 How timber production and tropical biodiversity conservation can be balanced

*African Rain Forest Ecology and Conservation* William Weber, Lee J. T. White, Lisa Naughton-Treves, Amy Vedder, 2001-01-01 Extending from west Africa to Madagascar from the vast lowland Congo Basin to the archipelago of forest islands on its eastern rim the African rain forest is surpassed in size only by the

Amazon This book sheds light on the current efforts to understand and conserve the African rain forest an area in need of urgent action to save its biological wealth cultural heritage and economic potential Written by conservation scientists and practitioners based in the African rain forest the book offers a multidisciplinary perspective that integrates many biological and social sciences Early chapters trace the forces from paleoecological factors to recent human actions that have shaped the African forest environment The next chapters discuss the dominant biological patterns of species ranging from the distinctive elephants gorillas and okapi to the less well known birds butterflies and amphibians Other chapters focus on how such different groups as hunter gatherers forest farmers bushmeat hunters recent immigrants and commercial foresters have used the forests Several authors stress the need for tighter links between research and conservation action The final section draws lessons from the collective experience of those working in an Africa wracked by political strife and economic hardship

*Conserving Biological Diversity in Managed Tropical Forests* Jill M. Blockhus,1992 At the meeting of the International Tropical Timber Organization held in Bali in 1990 ITTO adopted the target of ensuring that all tropical timber marketed internationally should by the year 2000 come from forests that are managed sustainably This study is an attempt to determine whether the member countries of the ITTO have a legal and administrative basis for managing their production forests in ways which will allow these forests to contribute to biological diversity conservation It also attempts to assess the extent to which such management is already applied on the ground through member country studies A set of guidelines on ways in which management of production forests could be improved is included People of the Tropical Rain Forest Julie Sloan Denslow,Christine Padoch,Curator of the Institute of Economic Botany Christine Padoch,1988-01-01 Looks at the depiction of tropical rain forests in movies and art discusses government policy business exploitation and the future of the rain forest and describes the lives of forest people in South America Africa and Asia **Progress in Conserving Tropical Forests and Biological Diversity in Developing Countries** ,1988 *Conservation of Tropical Rainforests* Brian Joseph McFarland,2017-11-14 This book critically engages with how the conservation of tropical rainforests is financed Beginning with the context of tropical deforestation alongside an overview of tropical ecology global environmental policy and finance the book reviews several conservation financing instruments These include ecotourism and private reserves debt for nature swaps and government domestic budgetary expenditures for state and national parks Tropical deforestation and forest degradation are serious global environmental issues contributing to global climate change species extinction and threatening the livelihoods of forest dependent communities Yet many leading companies individuals and governments are making a positive impact on tropical forest conservation to mitigate greenhouse gas emissions through the use of conservation finance Conservation of Tropical Rainforests tells the history of international conservation finance and provides a variety of options for individuals businesses and governments to support conservation financing projects *Biodiversity Loss and Conservation in Fragmented Forest Landscapes* Adrian C. Newton,2007-01-01 Based on a field research on the changing

montane and temperate rainforests of Mexico and South America By concentrating on these largely overlooked environments this work allows for comparative analysis across areas and helps identify how human disturbance has impacted the biodiversity of all forest types      **Conservation and management of tropical forests and biological diversity in Zaire** Jeff Goodson,1988      The Future of Tropical Rain Forests in South East Asia J. Davidson,John Michael Davidson,Tho Yow Pong,Maarten Bijleveld,1985      Tropical Rain Forest F B Goldsmith,1998-01-31      **Tropical Ecosystems and Ecological Concepts** Patrick L. Osborne,2000-08-31 An introductory textbook on tropical ecology unique in its international scope and balanced coverage of both aquatic and terrestrial systems      **Conserving Rain Forests** Martin Banks,1990-02 Describes the rapidity with which the rain forests of the world are being destroyed the harm to plants animals and humans and remedies for preserving the rain forests      **Myth and Reality in the Rain Forest** John F. Oates,1999 This book offers a timely clear headed and uniquely important contribution to conservation one that should be read by all bureaucrats scientists and others involved with development projects that supposedly benefit wildlife and wilderness George B Schaller author of Wildlife of the Tibetan Steppe      **The Conservation Atlas of Tropical Forests** N.Mark Collins,1991-06-18 The first of a series designed to cover all tropical rain forests in the world This is a visual portfolio of detailed maps of Asia accompanied by a text which seeks to analyze the extent and causes of deforestation and to point a way towards sustainable forest development      **Temperate and Boreal Rainforests of the World** Dominick A. DellaSala,2011 Temperate rainforests are biogeographically unique Compared to their tropical counterparts temperate rainforests are rarer and are found disproportionately along coastlines Because most temperate rainforests are marked by the intersection of marine terrestrial and freshwater systems these rich ecotones are among the most productive regions on Earth Globally temperate rainforests store vast amounts of carbon provide habitat for scores of rare and endemic species with ancient affinities and sustain complex food web dynamics In spite of their global significance however protection levels for these ecosystems are far too low to sustain temperate rainforests under a rapidly changing global climate and ever expanding human footprint Therefore a global synthesis is needed to provide the latest ecological science and call attention to the conservation needs of temperate and boreal rainforests A concerted effort to internationalize the plight of the world s temperate and boreal rainforests is underway around the globe this book offers an essential and heretofore missing tool for that effort DellaSala and his contributors tell a compelling story of the importance of temperate and boreal rainforests that includes some surprises e g South Africa Iran Turkey Japan Russia This volume provides a comprehensive reference from which to build a collective vision of their future      Biodiversity Conservation Charles A. Perrings,Karl-Göran Mäler,Carl Folke,C.S. Holling,Beng-Owe Jansson,2012-12-06 This book reports the more policy oriented results of the Biodiversity programme of the Royal Swedish Academy of Sciences Beijer Institute The programme brought economists and ecologists together to consider where the problem in biodiversity loss really lies what costs it has for society and how it might best be addressed The results are

strikingly different from those reported in other works on the subject Biodiversity loss matters for all ecosystems not just the megadiversity tropical forests And it matters because it compromises the resilience and so the productivity of those systems Biodiversity conservation requires the development of policies that change the behaviour of resource use everywhere not just in parks and reserves The book is required reading for researchers and policy makers alike It canvasses options for the reform of park management biodiversity conservation projects property rights tax trade and price regimes that are within the reach of governments everywhere      **Tropical Forests and Biological Diversity** United States. Agency for International Development,1992
