## **Constant Star:**

**The Lost Era: One Constant Star** David R. George III, 2014-05-27 An original novel set in The Lost Era time period between Star Trek The Original Series and Star Trek The Next Generation When Captain Demora Sulu leads the crew of U S S Enterprise B on a mission near Tzenkethi space they explore Rejarris II a mysterious planet A strange structure on the surface could hold answers but when a landing party transports down to study it chaos erupts After communication fails with one officer and another is horribly injured Captain Sulu deems the planet too dangerous to continue exploring She decides to leave Rejarris II but not until she can retrieve her lost crew member But when contact is ultimately severed with the captain a Tzenkethi force subsequently appears Could they be behind the mysteries on the planet or the disappearances of the Enterprise officers Regardless will Sulu s crew be able stand up to them long enough to find and retrieve their captain and the other missing personnel

**The Constant Star** Jessica Stirling, 2014-08-14 London in the Blitz the story of The Wayward Wife continues in this compelling saga of love and war Susan Cahill enjoys her job at the BBC until a bomb destroys the building and brings unwelcome responsibilities and an autocratic new boss Walter Boscombe He has no time for ambitious young women from Shadwell and seems determined to break Susan s spirit and her heart Breda Hooper Susan s widowed sister in law and her small son are rescued from the East End s shattered docklands by Danny Susan s estranged husband Settled in a shabby caravan in the Vale of Evesham Breda soon finds herself entangled in village affairs in more ways than one with only her quick wits her new friends and the ever dependable Danny to keep her out of trouble For Susan and Breda jeopardy comes not from the skies but in the terrible price each must pay for falling in love with men who are not all that they seem to be and who even in the midst of all out war will change their lives forever Your Constant Star Brenda Hasiuk, 2014-04 Three Winnipeg teens deal with pregnancy cultural differences and the fallout of bad decisions

**Variable Stars as Essential Astrophysical Tools** Cafer Ibanogammalu, 2012-12-06 Pulsating and eccentric binary stars play a fundamentally important role in deciphering the mass distribution within stars The present volume reviews the fundamental concepts of both radial and nonradial oscillations in the stars including the Sun Helio and astroseismological results are reviewed from the basics to the most recent developments A new theory is presented which seems to explain the mechanism of the light and radial velocity variations of recently discovered Ap stars This textbook covers almost all kinds of variable stars of widely different characteristics It will serve as a reference text for a very long time to come not only for specialists but also for undergraduate students of physics and astronomy

**The Properties of Star-Forming Galaxies at Z~2** Dawn Erb, 2005 We study the properties of star forming galaxies at redshift  $z \sim 2$  an era in which a substantial fraction of the stellar mass in the universe formed Using 114 near IR spectra of the H alpha and N II emission lines and model spectral energy distributions fit to rest frame UV through IR photometry we examine the galaxies star formation properties dynamical masses and velocity dispersions spatially resolved kinematics outflow properties and metallicities as a function of stellar

mass and age While the stellar masses of the galaxies in our sample vary by a factor of 500 dynamical masses from H alpha velocity dispersions and indirect estimates of gas masses imply that the variation of stellar mass is due as much to the evolution of the stellar population and the conversion of gas into stars as to intrinsic differences in the total masses of the galaxies About 10% of the galaxies are apparently young starbursts with high gas fractions caught just as they have begun to convert large amounts of gas into stars Using the N II H alpha ratio of composite spectra to estimate the average oxygen abundance we find a monotonic increase in metallicity with stellar mass From the estimated gas fractions we conclude that the observed mass metallicity relation is primarily driven by the increase in metallicity as gas is converted to stars The picture that emerges is of galaxies with a broad range in stellar population properties from young galaxies with ages of a few tens of Myr stellar masses  $M \sim 10^{10}$  DEGREES  $9 M_{\text{sun}}$  and metallicities  $Z \sim 1/3 Z_{\text{sun}}$  to massive objects with  $M \sim 10^{11}$  DEGREES  $11 M_{\text{sun}}$   $Z \sim Z_{\text{sun}}$  and ages as old as the universe allows All however are rapidly star forming power galactic scale outflows and have masses in gas and stars of at least  $10^{10}$  DEGREES  $10 M_{\text{sun}}$  in keeping with their likely role as the progenitors of elliptical galaxies *The Interplay Between Massive Star Formation, the ISM and Galaxy Evolution* D. Kunth, 1996 **Star**

**Formation** Mark R Krumholz, 2017-05-11 Krumholz has a strong writing style didactic to be sure but also fairly conversational within the limits of the material While hardly casual reading this text would be a good resource for a stellar astrophysicist or any individual seeking to become one CHOICE This book provides a modern introduction to the study of star formation at a level suitable for graduate students or advanced undergraduates in astrophysics The first third of the book provides a review of the observational phenomenology and then the basic physical processes that are important for star formation The remainder then discusses the major observational results and theoretical models for star formation on scales from galactic down to planetary The book includes recommendations for complementary reading from the research literature as well as five problem sets with solutions [A Multi-Wavelength Census of Star Formation at Redshift  \$Z \sim 2\$](#)  Naveen

Reddy, 2006 We examine the census of star forming galaxies and their extinction properties at redshift  $z \sim 2$  when a large fraction of the stellar mass in the universe formed We find a good agreement between the X ray radio and de reddened UV estimates of the average star formation rate SFR for our sample of  $z \sim 2$  galaxies of  $50 M_{\text{sun}} \text{ yr}^{-1}$  indicating that the locally calibrated SFR relations appear to be statistically valid from redshifts 1-5 **From Luminous Hot Stars to Starburst**

**Galaxies** Peter S. Conti, Paul A. Crowther, Claus Leitherer, 2008-10-23 Luminous hot stars represent the extreme upper mass end of normal stellar evolution Before exploding as supernovae they live out their lives of a few million years with prodigious outputs of radiation and stellar winds dramatically affecting both their evolution and environments A detailed introduction to the topic this book connects the astrophysics of massive stars with the extremes of galaxy evolution represented by starburst phenomena A thorough discussion of the physical and wind parameters of massive stars is presented HII galaxies their connection to starburst galaxies and the contribution of starburst phenomena to galaxy evolution through superwinds are

explored The book concludes with the wider cosmological implications including Population III stars Lyman break galaxies and gamma ray bursts for each of which massive stars are believed to play a crucial role This book is ideal for graduate students and researchers in astrophysics interested in luminous hot stars and galaxy evolution     *The Impact of Binary Stars on Stellar Evolution* Giacomo Beccari, Henri M. J. Boffin, 2019-04-18 An advanced review of how binary stars affect stellar evolution presenting results from state of the art models and recent observations
