Constituent And Pattern In Poetry:

Constituent and Pattern in Poetry Archibald A. Hill, 2014-07-03 *Constituent and Pattern in Poetry* is a collection of essays on literature and language. It is built on the assumption that works of literature have existence in the real world and that they may be analyzed in a fashion that is not totally subjective. Using models derived from structural linguistics, Archibald A. Hill presents a number of theoretical contributions to the study of poetry as well as new ways of looking at specific poems. The book as a whole provides an overview of the tools and ideas Hill has developed for analyzing works of literature and it is the first time the essays have been gathered together in one volume. The book is divided into three sections: Definition of Literature and Study of Its Patterns, Types of Meaning and Imagery, and Principles for Interpreting Meaning. Each section opens with a theoretical essay followed by three essays that work analytically with specific poets and poems using the methods defined in the first. In his examination of such poets as Hopkins, Browning, Milton, Blake, Keats, and Dickinson, Hill uses such proposals as the law of least lexical contribution and maximal contextual contribution, the hypothesis that when possible meanings occur together in a cluster they support each other, and the idea that it is sometimes possible to recover underlying language sequences from which the author has departed for identifiable reasons. By applying these suppositions to the study of particular poems, Hill shows how the reader may arrive at statements about the relative artistic merit of works of literature.

Highly complex syllable structure: A typological and diachronic study Shelece Easterday, 2019-11-13 The syllable is a natural unit of organization in spoken language whose strongest cross linguistic patterns are often explained in terms of a universal preference for the CV structure Syllable patterns involving long sequences of consonants are both typologically rare and theoretically marginalized with few approaches treating these as natural or unproblematic structures This book is an investigation of the properties of languages with highly complex syllable patterns The two aims are i to establish whether these languages share other linguistic features in common such that they constitute a distinct linguistic type and ii to identify possible diachronic paths and natural mechanisms by which these patterns come about in the history of a language These issues are investigated in a diversified sample of 100 languages 25 of which have highly complex syllable patterns Languages with highly complex syllable structure are characterized by a number of phonetic phonological and morphological features which serve to set them apart from languages with simpler syllable patterns These include specific segmental and suprasegmental properties a higher prevalence of vowel reduction processes with extreme outcomes and higher average morpheme word ratios The results suggest that highly complex syllable structure is a linguistic type distinct from but sharing some characteristics with other proposed holistic phonological types including stress timed and consonantal languages The results point to word stress and specific patterns of gestural organization as playing important roles in the diachronic development of these patterns out of simpler syllable structures
