   **Constraint Databases and Applications** Bart Kuijpers,Peter Revesz,2004-10-14 The rst International Symposium on the Applications of Constraint Databases CDB2004 took place in Paris France on June 12 13 2004 just before the ACM SIGMOD and PODS conferences Since the publication of the paper Constraint Query Languages by Kan lakis Kuper and Revesz in 1990 the last decade has seen a growing interest in constraint database theory query evaluation and applications re ected in a variety of conferences journals and books Constraint databases have proven to be extremely exible and adoptable in environments that relational database systems cannot serve well such as geographic information systems and bioinf matics This symposium brought together people from several diverse areas all c tributing to the practice and the application of constraint databases It was a continuation and extension of previous workshops held in Friedrichshafen G many 1995 Cambridge USA 1996 Delphi Greece 1997 and Seattle USA 1998 as well as of the work in the comprehensive volume Constraint Data ses edited by G Kuper L Libkin and J Paredaens 2000 and the textbook Introduction to Constraint Databases by P Revesz 2002 The aim of the symposium was to open new and future directions in c straint database research to address constraints over domains other than the reals to contribute to a better implementation of constraint database systems in particular of query evaluation to address e cient quanti er elimination and to describe applications of constraint databases     Constraint Databases Gabriel Kuper,Leonid Libkin,Jan Paredaens,2013-03-09 This book is the first comprehensive survey of the field of constraint databases Constraint databases are a fairly new and active area of database research The key idea is that constraints such as linear or polynomial equations are used to represent large or even infinite sets in a compact way The ability to deal with infinite sets makes constraint databases particularly promising as a technology for integrating spatial and temporal data with standard re lational databases Constraint databases bring techniques from a variety of fields such as logic and model theory algebraic and computational geometry as well as symbolic computation to the design and analysis of data models and query languages The book is a collaborative effort involving many authors who have con tributed chapters on their fields of expertise Despite this the book is designed to be read as a whole as opposed to a collection of individual surveys In par ticular the terminology and the style of presentation have been standardized and there are multiple cross references between the chapters The idea of constraint databases goes back to the late Paris Kanellakis

This symposium brought together people from several diverse areas all c tributing to the practice and the application of constraint databases It was a continuation and extension of previous workshops held in Friedrichshafen G many 1995 Cambridge USA 1996 Delphi Greece 1997 and Seattle USA 1998 as well as of the work in the comprehensive volume Constraint Data ses edited by G Kuper L Libkin and J Paredaens 2000 and the textbook Introduction to Constraint Databases by P Revesz 2002 The aim of the symposium was to open new and future directions in c straint database research to address constraints over domains other than the reals to contribute to a better implementation of constraint database systems in particular of query evaluation to address e cient quanti er elimination and to describe applications of constraint databases

   **Introduction to Constraint Databases** Peter Revesz,2006-04-18 Differing from other books on the subject this one uses the framework of constraint databases to provide a natural and powerful generalization of relational databases An important theme running through the text is showing how relational databases can smoothly develop into constraint databases without sacrificing any of the benefits of relational databases whilst gaining new advantages Peter Revesz begins by discussing data models and how queries may be addressed to them From here he develops the theory of relational and constraint databases including Datalog and the relational calculus concluding with three sample constraint database systems DISCO DINGO and RATHER Advanced undergraduates and graduates in computer science will find this a clear introduction to the subject while professionals and researchers will appreciate this novel perspective on their subject     **Constraints and Databases** Raghu Ramakrishnan,Peter Stuckey,2012-12-06 Constraints and Databases contains seven contributions on the rapidly evolving research area of constraints and databases This collection of original research articles has been compiled as a tribute to Paris C Kanellakis one of the pioneers in the field Constraints have long been used for maintaining the integrity of databases More recently constraint databases have emerged where databases store and manipulate data in the form of constraints The generality of constraint databases makes them highly attractive for many applications Constraints provide a uniform mechanism for describing heterogenous data and advanced constraint solving methods can be used for efficient manipulation of constraint data The articles included in this book cover the range of topics involving constraints and databases join algorithms evaluation methods applications e g data mining and implementations of constraint databases as well as more traditional topics such as integrity constraint maintenance Constraints and Databases is an edited volume of original research comprising invited contributions by leading researchers     Recent Advances in Temporal Databases James Clifford,Alexander Tuzhilin,2012-12-06 The International Workshop on Temporal Databases held in Zurich Switzerland 17 18 September 1995 brought together researchers from academic and industrial institutions with database practitioners interested in keeping up with the state of the art developments in the management of temporal data A previous workshop in Arlington Texas in June 1993 focused on the development of an infrastructure that would spur the development of commercial implementations of many of the generally agreed upon features of temporal database management that have

emerged from the temporal database research community over more than a decade of research This ARP AlNSF sponsored Arlington workshop saw the formation of the TSQL2 Language Design Committee which led to the development of the recently completed TSQL2 Language Specification and also created a consensus glossary of temporal database terminology and a test suite of temporal database queries The Zurich workshop was conceived from the outset to be universal in scope and international in participation The Call for Papers sought to evoke the highest quality and most up to date temporal database research from around the world Mindful of the important work accomplished by the previous workshop the Call also specifically sought out research papers and panels that would comment and build upon the widely publicized results from Arlington These proceedings contain the papers that were selected for presentation at the International Workshop on Temporal Databases held in Zurich Switzerland on 17 18 September 1995 **Programming with Constraints** Kim Marriott,Peter J.
