International Manufacturing Strategy in a Time of Great Flux Louis Brennan, Alessandra Vecchi, 2016-09-02 This book assesses the state of international manufacturing strategy and clarifies how recent developments, for example regarding configuration technology and the environment, are impacting on its content and direction and on its relationship to manufacturing performance. In providing up-to-date coverage of the consequences of such forces and factors for international manufacturing, this book aims to expand the debate concerning international manufacturing strategy and cast light on its current evolution. International manufacturing is operating within a time of great flux. While offshoring of activities has dominated over recent decades, nearshoring and reshoring are increasingly being considered and observed in practice. At the same time, technologies such as 3D printing are gaining traction and the role of ICT and data analytics is increasingly important in the international manufacturing landscape while digitization becomes more prevalent and the embrace of the Internet of Things (IOT) accelerates. Furthermore, issues related to the environment are figuring more prominently in international manufacturing considerations and assumptions regarding the long-term cost of energy are being called into question. International manufacturing is also experiencing greater servitization.

CONSTRAINT MANAGEMENT: Throughput, Operating Expense and Inventory Mayank Chowdhary, 2009-12 Sometimes our constraints aren't merely physical. In many cases, they're policies, the laws, regulations, rules, or procedures that determine what we can or can't do. Even the way we think can be a constraint to ourselves and our organizations. This book deals on how we can manage organizations' constraints. It shows which reports and metrics to use in a throughput environment. It also gives emphasis on how throughput accounting can be used to find the best solutions in a large number of real-world situations.

activities help to reduce uncertainties in construction processes and increases the transparency of project management. Various continuous improvement CI strategies have been developed and applied to improve manufacturing system performance. This paper studies the combination of two distinct strategies: Lean Manufacturing (LM) and Theory of Constraints (TOC) for improving manufacturing system performance. The research includes reviews of these two methodologies and the implementation process involved in each strategy. Examination of the possibilities to improve manufacturing system performance through integration of these two strategies. The effectiveness of the integrated approach along with an examination of different factors, recommendations and presentation of best possible management practices for the application of this integrated approach. In an organization, there are attempts to achieve multiple projects with common shared resources; the work can be challenging. Managers might find themselves on project overload with continual resource shortages and difficulty in determining the most important tasks. The focus of the research is on the elimination of non-value-added activities through an application of a management philosophy that identifies and eliminates the waste from each step in the production throughout the Value Stream. A comparative analysis is carried out through reviews and studies regarding Lean Process and TOC application to determine the manager's potential benefits like reduced production lead time and lesser work in process inventory.
