**Making Model Railway Buildings** Andy McMillan, 2014-04-30

This invaluable book is essential reading for all railway modellers whatever their level of expertise. The author provides an overall understanding of the purpose of making buildings for a model railway and covers their construction, their positioning and how to light them. Topics covered include railway and non railway buildings explaining how the latter can also enhance your trains modelling attitudes, the use of scale, levels of detail and both regional vernacular and railway architecture, ready made buildings and how you can adapt them to your own particular purposes, different materials available for building structures and ways of choosing, finding, measuring and recording suitable prototypes, step by step construction of a cardboard building kit to illustrate the use of basic modelling tools and to explain essential procedures and techniques using and modifying out of the box model buildings. Also explores the subtleties of making model railway buildings from scratch without the use of a kit or anything more than hand tools and a few sheets of suitable material, giving guidance on the appropriate use of texture and colour and shows how walls, doors, windows, roofs and chimneys can be created, painted, detailed and finished off. Discusses the many aspects of lighting including external lighting such as street and platform lights and the internal lighting of buildings, the problems they pose and how they can be resolved. Lighting can create dramatic effects with reference for example to the installation of illuminated ground signals in N gauge using the latest surface mount technology and by producing brilliantly illuminated back lit sunsets. Superbly illustrated with 622 colour photographs.

Building Product Models Charles M Eastman, 1999-07-29 *Building Product Models* thoroughly presents the concepts, technology and methods now used to work out what will become the building product model, a new digital representation for architecture, civil engineering and building construction. Organized into three sections: history, current tools and concepts, and existing efforts and research issues, this resource provides the field of building product modeling with a standard reference as well as a single comprehensive text for university courses. Until now all the efforts in building modeling have been reported in research journals and conference proceedings or been made available as draft standards on the Internet. *Building Product Models* is the only book available on this vital field, bringing together essential aspects of major efforts from the early 1970s to the present.

Building Information Modeling Karen M. Kensek, 2014-04-16 This is a design guide for architects, engineers and contractors concerning the principles and specific applications of building information modeling (BIM). BIM has the potential to revolutionize the building industry and yet not all architects and construction professionals fully understand what the benefits of BIM are or even the fundamental concepts behind it. As part of the PocketArchitecture Series, it includes two parts: fundamentals and applications, which provide a comprehensive overview of all the necessary and essential issues. It also includes case studies from a range of project sizes that illustrate the key concepts clearly and use a wide range of visual aids. *Building Information Modeling* addresses the key role that BIM is playing in shaping the software tools and office

processes in the architecture engineering and construction professions Primarily aimed at professionals it is also useful for faculty who wish to incorporate this information into their courses on digital design BIM and professional practice As a compact summary of key ideas it is ideal for anyone implementing BIM
