Constructing Nonhomeomorphic Stochastic Flows Memoirs Of The American Mathematical Society 376:

Constructing Nonhomeomorphic Stochastic Flows R. W. R. Darling, 1987 The purpose of this article is the construction of stochastic flows from the finite dimensional distributions without any smoothness assumptions Also examines the relation between covariance functions and finite dimensional distributions The stochastic continuity of stochastic flows in the time parameter are proved in each section These results give some extensions of the results obtained by Harris by Baxendale and Harris and by other authors In particular the author studies coalescing flows which were introduced by Harris for the study of flows of nonsmooth maps *Geometry of Random Motion* Richard Durrett, Mark A. Pinsky, 1988 In July 1987 an AMS IMS SIAM Joint Summer Research Conference on Geometry of Random Motion was held at Cornell University The initial impetus for the meeting came from the desire to further explore the now classical connection between diffusion processes and second order hypo elliptic differential operators To accomplish this goal the conference brought together leading researchers with varied backgrounds and interests probabilists who have proved results in geometry geometers who have used probabilistic methods and probabilists who have studied diffusion processes Focusing on the interplay between probability and differential geometry this volume examines diffusion processes on various geometric structures such as Riemannian manifolds Lie groups and symmetric spaces Some of the articles specifically address analysis on manifolds while others center on nongeometric stochastic analysis The majority of the articles deal simultaneously with probabilistic and geometric techniques Requiring a knowledge of the modern theory of diffusion processes this book will appeal to mathematicians mathematical physicists and other researchers interested in Brownian motion diffusion processes Laplace Beltrami operators and the geometric applications of these concepts The book provides a detailed view of the leading edge of research in this rapidly moving field **Novye inostrannye knigi, vypisannye BAN SSSR v ... godu**, 1989 **American Book Publishing Record**, 1988 *Books in Series, 1876-1949* R.R. Bowker Company, 1982 *Stochastic Flows in the Brownian Web and Net* Emmanuel Schertzer, Rongfeng Sun, Jan M. Swart, 2014-01-08 It is known that certain one dimensional nearest neighbor random walks in d dimensional random space time environments have diffusive scaling limits Here in the continuum limit the random environment is represented by a stochastic flow of kernels which is a collection of random kernels that can be loosely interpreted as the transition probabilities of a Markov process in a random environment The theory of stochastic flows of kernels was first developed by Le Jan and Raimond who showed that each such flow is characterized by its point motions The authors work focuses on a class of stochastic flows of kernels with Brownian point motions which after their inventors will be called Howitt Warren flows The authors main result gives a graphical construction of general Howitt Warren flows where the underlying random environment takes on the form of a suitably marked Brownian web This extends earlier work of Howitt and Warren who showed that a special case the so called erosion flow can be constructed from two coupled sticky Brownian webs The authors construction for general Howitt Warren flows is based on a

Poisson marking procedure developed by Newman Ravishankar and Schertzer for the Brownian web Alternatively the authors show that a special subclass of the Howitt Warren flows can be constructed as random flows of mass in a Brownian net introduced by Sun and Swart Using these constructions the authors prove some new results for the Howitt Warren flows
