Construction Principal Uses Of Mathema:

The Critical Review: Or, Annals of Literature Tobias Smollett, 1760 **Mathematical Instrumentation in Fourteenth-Century Egypt and Syria** François Charette, 2003-06-01 This volume contains the critical edition with English translation of a richly illustrated Arabic treatise on the construction of over one hundred various astronomical instruments many of which are otherwise unknown to specialists It was composed by Najm al D n al Misr a rather shadowy figure in Cairo ca 1330 The edition is accompanied by a detailed technical and historical commentary which is framed as a self standing essay on Islamic mathematical instrumentation While this essay commentary is mainly based on Najm al D n s treatise it also benefits from the consultation of a large number of previously unstudied manuscripts and includes a discussion of all relevant sources from the period 800 1500 **Catalogue of the Library of the Institution of Civil Engineers** Institution of Civil Engineers (Great Britain), 1866 **Research in History and Philosophy of Mathematics** Maria Zack, Elaine Landry, 2015-11-10 This volume contains thirteen papers that were presented at the 2014 Annual Meeting of the Canadian Society for History and Philosophy of Mathematics La Soci t Canadienne d Histoire et de Philosophie des Math matiques held on the campus of Brock University in St Catharines Ontario Canada It contains rigorously reviewed modern scholarship on general topics in the history and philosophy of mathematics as well as on the meeting s special topic Early Scientific Computation These papers cover subjects such as Physical tools used by mathematicians in the seventeenth century The first historical appearance of the game theoretical concept of mixed strategy equilibrium George Washington s mathematical cyphering books The development of the Venn diagram The role of Euler and other mathematicians in the development of algebraic analysis Arthur Cayley and Alfred Kempe s influence on Charles Peirce s diagrammatic logic The influence publishers had on the development of mathematical pedagogy in the nineteenth century A description of the 1924 International Mathematical Congress held in Toronto told in the form of a narrated slide show Written by leading scholars in the field these papers will be accessible to not only mathematicians and students of the history and philosophy of mathematics but also anyone with a general interest in mathematics *Principles of Mathematical, Physical, and Political Geography* Conrad Malte-Brun, 1834 **The Critical Review, Or, Annals of Literature** , 1760 Each number includes a classified Monthly catalogue *History of the Logarithmic Slide Rule and Allied Instruments* Florian Cajori, 1994-08-01 The slide rule with its many variations has been vital to mathematics and engineering since its invention in the 17th century Interest in this field has grown dramatically and collectors can still find much material at affordable prices Unfortunately there has been little information available except for manufacturers manuals and catalogs making this reprint of Cajori s classic particularly valuable Also included with this reprint of the 1910 edition is Cajori s extensive article On the History of Gunter s Scale and the Slide Rule during the 17th Century published by the University of California in 1920 which sets forth his subsequent findings There is also a helpful explanatory introduction by Dr Robert K Otnes editor of the Journal of the

Oughtred Society **Richard Woods (1715-1793)** Fiona Cowell, 2009 A contemporary of the famous landscape designer Capability Brown Richard Woods has never received the recognition he deserves in contrast to Brown he emphasised the pleasure ground and kitchen garden with a more pronounced use of flowers than was general among the landscape improvers of his time He liked variety and incident in his plans and where he was employed on a larger scale the encroachment of the pleasure ground into the park created the Woodsian pleasure park In this important work of detection and biography Fiona Cowell analyses his designs and explores his activities as a plantsman a determined amateur architect and a farmer In particular she shows the difficulties he found as a Catholic living in penal times examining the difficulties encountered by both Woods and his Catholic patrons and placing the man and his work in their wider social and economic context Unjustly neglected in the past he is here given his rightful place among the creators of the English landscape style

How Round Is Your Circle? John Bryant, Chris Sangwin, 2011-02-28 How do you draw a straight line How do you determine if a circle is really round These may sound like simple or even trivial mathematical problems but to an engineer the answers can mean the difference between success and failure How Round Is Your Circle invites readers to explore many of the same fundamental questions that working engineers deal with every day it s challenging hands on and fun John Bryant and Chris Sangwin illustrate how physical models are created from abstract mathematical ones Using elementary geometry and trigonometry they guide readers through paper and pencil reconstructions of mathematical problems and show them how to construct actual physical models themselves directions included It s an effective and entertaining way to explain how applied mathematics and engineering work together to solve problems everything from keeping a piston aligned in its cylinder to ensuring that automotive driveshafts rotate smoothly Intriguingly checking the roundness of a manufactured object is trickier than one might think When does the width of a saw blade affect an engineer s calculations or for that matter the width of a physical line When does a measurement need to be exact and when will an approximation suffice Bryant and Sangwin tackle questions like these and enliven their discussions with many fascinating highlights from engineering history Generously illustrated How Round Is Your Circle reveals some of the hidden complexities in everyday things **Source**

Selling Science in the Age of Newton Jeffrey R. Wigelsworth, 2016-04-01 Selling Science in the Age of Newton explores an often ignored avenue in the popularization of science It is an investigation of how advertisements in London newspapers from approximately 1687 to 1727 enticed consumers to purchase products relating to science books lecture series and instruments London's readers were among the first in Europe to be exposed to regular newspapers and the advertisements contained in them This occurred just as science began to captivate the nation's imagination due in part to Isaac Newton's rising popularity following the publication of his Principia 1687 This unique moment allows us to see how advertising helped shape the initial public reception of science This book fills a substantial gap in our understanding of science and the culture in which it developed by examining the medium of advertising and its function in the discourse of both early modern science and commerce It answers questions such as what happens to science once it is a commodity how are consumers tempted to purchase science amidst a sea of other commodities how is the reading public encouraged to give social acceptance to facts of nature and how did marketing campaigns craft newspapers readers into a source of validation for the items of science advertised In an age where the production of scientific knowledge increasingly relied upon sales to many rather than the endorsement of a single wealthy patron marketing was the key to success
