in practice *Commerce Business Daily*, 1997-12-31 *International Contracting* Arjan Van Weele, 2014 This book about international contracting and contract management is written from the angle of the contractor and discussed from an international perspective. It comments on real life cases taken from various kinds of projects: infrastructural works, roads, bridges, tunnels, rail roads, wind and sun farms, oil and gas installations such as platforms, pipe lines, power generating works and large buildings. The book is structured around the contracting cycle. Chapters include dealing with the role of the contractor in international contracting, the tender process, landing and negotiating the contract, types of contract problems that may occur during project execution, project delivery and handling guarantee claims. Written primarily for business practitioners operating in the international contracting industry, the title assumes that the reader will have a basic understanding and knowledge of theories related to project management, construction engineering, business law and economics. Though not an academic book due to its unique blend of practitioners' insight and academic theory, it can be taught in courses at institutes at the master level. As most engineers are going to deal with contracts, this book is specifically recommended for engineering programs both at the graduate and postgraduate level. Lawyers will find the book useful to understand the business context in which their customers and/or colleagues work.

**Profitable Partnering for Lean Construction** Clive Thomas Cain, 2008-04-15 The lean procurement techniques given in this practical guide could save clients up to 40% of total design and construction costs. Case history evidence is included to prove that the techniques really work. The guide goes on to explain in equal depth the lean construction techniques that supply side design and construction firms, including trades contractors, need to adopt to deliver the savings while boosting their profit margins. Written in an accessible style, it explains why lean construction techniques will only deliver this high level of savings if they are underpinned by long term strategic supply side partnering relationships between consultants, construction contractors, trades contractors and manufacturers. This is a how to book written in terms everyone can understand without the need for an expert interpreter or costly training.
