## **Construction Process Improvement:**

**Construction Innovation and Process Improvement** Akintola Akintoye, Jack Goulding, Girma Zawdie, 2012-03-05  
Innovation in construction is essential for growth. The industry strives to remain competitive using a variety of approaches and needs to engage structured initiatives linked to proven innovation concepts, techniques and applications. Even in mature markets like the Architecture Engineering and Construction (AEC) sector where business behaviour is generally considered as being risk averse, it is increasingly important to embed innovation into mainstream business practices. In *Construction Innovation and Process Improvement*, a number of wide-ranging issues from construction practice in different countries with different contexts are presented to provide a rich collection of literature embracing theory and practice. Chapters are divided into three broad themes of construction innovation relating to Theory and Practice, Process Drivers and Future Technologies. Several questions are posed, including for example: What is particularly unique about construction innovation in theory and practice? What are the major drivers of construction innovation? What factors are needed to support and deliver future construction technologies? In attempting to respond to such questions, the book sheds new light on these challenges and provides readers with a number of ways forward, especially cognisant of the increased role of globalisation, the enhanced impact of knowledge and importance of innovation. All these can have a significant impact on strategic decision making, competitive advantage and sustainable policies and practices. Part One deals with change management, technology, sustainable construction and supply chain management. Part Two addresses innovation and process improvement drivers, including strategic management, concurrent engineering, risk management, innovative procurement, knowledge management. Part Three explores future technologies in construction and particularly how these can be harnessed and leveraged to help procure innovation and process improvement.

**Construction Process Improvement** Brian Atkin, Jan Borgbrant, Per-Erik Josephson, 2008-04-15  
The construction process has come under intense scrutiny in recent times and this is set to continue as building owners and users demand better value for money from a more sustainable built environment. The construction sector's actors are responding to the challenges implicit in this drive for greater competitiveness and social responsibility. New forms of procurement, innovation programmes, knowledge management, CAD supported processes, predictive and diagnostic tools and many more initiatives are helping to transform the sector. *Construction Process Improvement* showcases 21 examples of how directed efforts are being taken to raise productivity and quality, reduce waste and costs and provide more certain and durable products for the sector's customers. Each example is the subject of a closely coupled collaborative project in which answers are being sought on matters of strategic importance to companies. The chapters that describe and discuss these projects balance state-of-the-art reviews with details of the work being undertaken and in many cases the results that are being implemented within the companies. *Construction Process Improvement* deals with issues that matter to best practice companies and researchers in industry and universities. It covers amongst other topics modularisation for

manufactured housing life cycle methods in housing commercial buildings and services installations tools and techniques for performance prediction and diagnostics coordination of design and production processes novel use of traditional materials new forms of procurement and the role of innovation public private partnerships partnering structures learning organisations management of major refurbishment management information systems TQM and continuous improvement CAAD methodology tools and 4 D CAD and facilities management This book analyses the way forward for improving the construction process in particular the links between research and development and industrial competitiveness The implementation of new methods and thinking in companies is examined and important advice for senior managers and researchers is offered

Green, 2011-04-08 The book sets out deliberately to challenge the current construction improvement debate and the way in which it is conducted It confronts the supposedly neutral nature of construction best practice and demonstrates that that the advocated recipes seldom stand up to critical scrutiny It further argues that commonly accepted components of best practice such as lean construction partnering and collaborative working rarely live up to the claims made on their behalf Such recipes invariably suffer from definitional vagueness and are constantly reinterpreted to suit the needs the different audiences Making Sense of Construction Improvement argues that construction sector improvement techniques cannot be understood in terms of their substantive content and are best understood in terms of the rhetoric within which they are presented The author also contends that the persuasiveness of such recipes depends upon the extent to which practitioners can adopt them for the purposes of making sense of the changes they observe happening around them To be accepted as best practice construction improvement techniques must also resonate with broader agendas of socio technological change The author charts how the best practice debate has developed from the aftermath of the Second World War through to the election of David Cameron's coalition government in 2010 Attention is given to the way in which the improvement debate throughout the 1960s and 70s was shaped by the broader aspirations of the post war social consensus and the associated desire for a centrally planned economy Attention thereafter is given to the way the construction sector was radically re shaped by the advent of the enterprise culture The privatisation of the sector's client base coupled with the withdrawal of the state as a provider of mass housing caused a significant and long lasting shift in the construction landscape Private sector clients similarly experienced extensive downsizing while outsourcing their procurement capabilities Such strategies were frequently justified by mobilising the rhetoric of business process re engineering BPR Contracting firms simultaneously faced

unpredictable workloads and increasing market competition In response the sector at large chose to base their competitive advantage on leanness and agility Hence the emergence of the hollowed out firm as the dominant form of organising These structural trends combined to provide the backcloth to the industry improvement agenda throughout the 1980s and 1990s Making Sense of Construction Improvement argues that the popularity of improvement recipes such as partnering collaborative working and integrated teams can be understood as strategies for overcoming the loss of control associated with downsizing and outsourcing In contrast to other textbooks Making Sense of Construction Improvement does not offer advice on how to manage construction projects more effectively the aim is rather to understand the forces which have shaped the construction sector improvement agenda over time
