Construction Safety Management Systems Steve Rowlinson,2004-04-29 The construction industry has a distressingly poor safety record whether measured in absolute terms or alongside other industries The level of construction safety in a country is influenced by factors such as variations in the labour forces shifting economies insurance rates legal ramifications and the stage of technological development Yet the problem is a world wide one and many of the ways of tackling it can be applied across countries Effective tools include designing preplanning training management commitment and the development of a safety culture The introduction and operation of effective safety management systems represents a viable way forwards but these systems are all too rarely implemented How can this be done Should we go back to prescriptive legislation This book considers these questions by drawing together leading edge research papers from the proceedings of an international conference conducted by a commission W099 on Safety and Health on Construction Sites of CIB the international council of building research organisations

Construction Site Safety Richard D. Hislop,1999-06-29 An important part of an organization s overall safety and health program involves safety management for contractors A contractor with a poor safety program can adversely affect quality productivity schedules and overall cost This book explains how to manage project safety and improve the odds of an injury free workplace If project mana

Management and Economics of Construction Safety in Hong

Kong S.W. Poon, S.L. Tang, Francis K.W. Wong, 2008-07-01 Hong Kong had a very bad record in construction safety in the 1980s and before. Since the early 1990s a number of statutory regulations have been enforced in order to improve safety in Hong Kong's construction industry. The results of these efforts can gradually be seen and this is evidenced by the significant drop in construction accidents in recent years. This book is important in keeping construction professionals informed about Hong Kong's experience in construction safety. It begins with an overview of safety management systems generally adopted in the Asian context with the support of construction accident statistics from a number of countries or cities. Other topics include factors which influence site safety programmes, construction safety management systems, safety legislation, safety auditing, the procedure of accident investigation, the Hong Kong government's mandatory SSPS (Site Supervision Plan) System that all contractors and authorized persons, registered structural engineers, have to follow, and construction safety economics.
