**The Practice of Constructivism in Science Education** Kenneth G. Tobin, 2012-11-12 This volume provides a needed elaboration of theories and potential applications of constructivism in science education Although the term constructivism is used widely there has been a dearth of materials to guide science educators concerning the potential of constructivism to influence what is done in the field In fact there has been a tendency for constructivism to be viewed as a method that can be used in a classroom This view tends to diminish the power of constructivism as a way of thinking about education and in particular about science education The chapters in this book address the need to document the theoretical roots of constructivism and to describe how practitioners have applied constructivist oriented beliefs in the practice of K 12 teaching of science and mathematics as well as teacher education Not only does this book contain different theoretical perspectives on constructivism but it also features a chapter that critiques constructivism as an epistemology Specific topics covered include cooperative learning the negotiation of meaning problem centered learning social construction of knowledge science in culturally diverse settings curriculum planning and implementation and instructional technology Issues associated with the preparation and enhancement of science teachers and the reform of science education are also explored

**THEORY IN SELF-DETERMINATION** Michael L. Wehmeyer, Brian H. Abery, Dennis E. Mithaug, Roger J. Stancliffe, 2003-01-01 This text provides a comprehensive overview of three theoretical perspectives proposed during the past decade addressing the self determination construct as it applies to the field of special education The three models were selected primarily because they have focused on defining and categorizing self determination for all students with disabilities including students with mental retardation and other cognitive disabilities These models are intended to provide students and practitioners a solid grounding in self determination theory All models have been evaluated among students with cognitive disabilities but are applicable to all students with or without disabilities The authors research each model and have applied their own theoretical framework to special education ensuring that interventions to promote skills like problem solving goal setting decision making and self advocacy are in place for all students By reading this text the reader will gain a solid theoretically based foundation in understanding the self determination construct which ultimately supports the development of instructional interventions that enable students with disabilities to become self determined It will be useful as a text in upper undergraduate and graduate courses in special education psychology social work welfare general education vocational rehabilitation and disability studies
