Textbook of Contact Dermatitis R.J.G. Rycroft, Torkil Menne, Peter J. Frosch, Claude Benezra, 2013-12-01 Ideally every patient with eczema should be patch tested and the importance of this investigation is now universally accepted The

simplicity of the technique belies its many pitfalls the greatest being to lack the knowledge required to select the correct allergens and to interpret the results The introduction nearly 20 years ago of the journal Contact Dermatitis greatly stimulated the reporting of the clinical side of contact dermatitis but a vast amount of laboratory work has also been published in other journals on the mechanisms and theory of these reactions The literature on the subject is now quite vast and a comprehensive book on the clinical and research aspects of contact dermatitis has been sorely needed This textbook was carefully planned to gather together what is known of the subject into a cohesive whole and it has succeeded admirably It consists of 22 chapters written by 41 contributors each selected for their special study of particular subjects Every feature of contact dermatitis has been covered beginning with its history and even concluding with the names and addresses of those worldwide who have a specific interest in the subject The text is illustrated and well laid out it has been broken up into clearly demarcated sections making it easy to read and its information readily accessible One's own writing concentrates the mind but editing the texts of authors from so many different countries was a task of considerable proportions

Toxicology of Contact Hypersensitivity Ian Kimber, Thomas Maurer, 1996-02-07 An analysis of allergic contact dermatitis a common occupational health problem affecting between 5-15% of the workforce This book considers the condition from the perspective of the toxicologist rather than the dermatologist

Food Additives A. Larry Branen, P. It was attended by more than 200 scientists from 27 countries representing all the Member States of the European Economic Community and the six Regions of the World Health Organization. These scientists represented many different disciplines and interests. The Seminar's principal objectives were a review of recent advances in knowledge concerning the structure, function and dysfunction of the immunological system; a review of the effects of xenobiotics on the immune system in animals and humans; an examination of the human health implications of immunotoxicity; discussion and critical analysis of the procedures for the assessment of immunological damage; a discussion of needs for the further development of laboratory and epidemiological methods and their validation; and a consideration of current test strategies.
